Report of Independent Registered Public Accounting Firm

To the Stockholders and Board of Directors Banco Latinoamericano de Comercio Exterior, S. A.:

Opinion on the Consolidated Financial Statements

We have audited the accompanying consolidated statements of financial position of Banco Latinoamericano de Comercio Exterior, S.A. and subsidiaries (the Bank) as of December 31, 2020 and 2019, the related consolidated statements of profit or loss, comprehensive income, changes in equity, and cash flows for each of the years in the three-year period ended December 31, 2020, and the related notes (collectively, the consolidated financial statements). In our opinion, the consolidated financial statements present fairly, in all material respects, the financial position of the Bank as of December 31, 2020 and 2019, and the results of its operations and its cash flows for each of the years in the three-year period ended December 31, 2020, in conformity with International Financial Reporting Standards as issued by the International Accounting Standards Board.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States) (PCAOB), the Bank's internal control over financial reporting as of December 31, 2020, based on criteria established in Internal Control - Integrated Framework (2013) issued by the Committee of Sponsoring Organizations of the Treadway Commission, and our report dated April 29, 2021 expressed an ungualified opinion on the effectiveness of the Bank's internal control over financial reporting.

Basis for Opinion

These consolidated financial statements are the responsibility of the Bank's management. Our responsibility is to express an opinion on these consolidated financial statements based on our audits. We are a public accounting firm registered with the PCAOB and are required to be independent with respect to the Bank in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.

We conducted our audits in accordance with the standards of the PCAOB. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the consolidated financial statements are free of material misstatement, whether due to error or fraud. Our audits included performing procedures to assess the risks of material misstatement of the consolidated financial statements, whether due to error or fraud, and performing procedures that respond to those risks. Such procedures included examining, on a test basis, evidence regarding the amounts and disclosures in the consolidated financial statements. Our audits also included evaluating the accounting principles used and significant estimates made by management, as well as evaluating the overall presentation of the consolidated financial statements. We believe that our audits provide a reasonable basis for our opinion.

Critical Audit Matter

The critical audit matter communicated below is a matter arising from the current period audit of the consolidated financial statements that was communicated or required to be communicated to the audit committee and that: relates to accounts or disclosures that are material to the consolidated financial statements and (2) involved our especially challenging, subjective, or complex judgments. The communication of a critical audit matter does not alter in any way our opinion on the consolidated financial statements, taken as a whole, and we are not, by communicating the critical audit matter below, providing a separate opinion on the critical audit matter or on the accounts or disclosures to which it relates.

Assessment of the allowance for loan losses

As discussed in Notes 3.4 and 5 to the consolidated financial statements, the Bank's allowance for loan losses (ALL) was \$41.2 million as of December 31, 2020, of which \$36.6 million related to the allowance for loan losses evaluated on a collective basis (collective ALL) and \$4.6 million related to the allowance for loan losses evaluated on an individual basis (individual ALL). Fundamental to the Bank's ALL estimate are the customer credit risk rating and the country risk rating which the Bank assigns to each loan. These ratings are determined using models that incorporate judgmental inputs and assumptions including, for the customer credit rating model, forecasts of customer's financial performance and conditions and, for the country risk rating model, future macroeconomic scenarios and related assumptions. The Bank applies a three-stage approach to measure ALL. Generally, loans are initially classified in stage 1. Subsequently, the customer credit and country risk ratings are used to assess whether there has been a significant increase in credit risk (SICR), stage 2, or when the financial asset is credit impaired, stage 3. The Bank calculates a collective ALL for loans in stages 1 and 2 and assesses ECL on an individual basis for loans in stage 3. Lifetime ECL is recorded when the Bank determines that there has been a SICR (stage 2) or when the financial asset is in default (stage 3); otherwise, a 12-month ECL is recorded (stage 1). The collective ALL is the product of multiplying the Bank's estimates of probability of default (PD), loss given default (LGD) and the exposure at default (EAD) of each loan. The Bank uses models to develop the PD and LGD, which are derived from internal historical default and loss experience adjusted for current conditions. The Bank calculates ECL on an individual basis based on the expected cash flows which consider the possible recovery scenarios including the related collateral valuation when applicable. As a response to the COVID-19 pandemic, the Bank performed more frequent assessments of customer credit and country risk ratings to identify emerging risks.

We identified the assessment of the collective and individual ALL as a critical audit matter. It requires a high degree of audit effort involving subjective auditor judgment, including specialized skills and knowledge, due to the number and complexity of significant assumptions and the resulting significant measurement uncertainty. The collective and individual ALL methodologies required significant assumptions in the methods and models used to determine the PDs, LGDs and customer credit and country risk ratings. These significant assumptions included: historical observation periods; forecasts of macroeconomic scenarios and customer's financial performance and conditions, including the current and potential impacts of the COVID-19 pandemic; and cash flow recovery scenarios.

Page 3

The following are the primary procedures we performed to address this critical audit matter:

- sources of data and its extraction and processing.
- pandemic impacts.
- any relevant guarantees or underlying collateral used in the individual ALL estimate.

KPMG

We have served as the Bank's auditor since 2018.

Panama City, Republic of Panama April 29, 2021

 We evaluated the design and tested the operating effectiveness of certain internal controls related to the Bank's collective and individual ALL estimates. These included controls relating to: (i) model validation related to PD, LGD and collective ALL models, including the historical observation periods; (ii) review and approval of significant assumptions and judgments used by the Bank to determine customer credit and country risk ratings; (iii) data inputs for the collective and individual ALL models, including those used to determine PDs, LGDs and customer credit and country risk ratings, including technology controls over the

- We involved financial risk management professionals with specialized skills and knowledge, who assisted in: (i) evaluating the Bank's collective and individual ALL methodologies for compliance with the International Financial Reporting Standards as issued by the International Accounting Standards Board; (ii) assessing the conceptual soundness and performance testing of the PD and LGD models by inspecting model documentation to determine whether the models are suitable for their intended use; (iii) evaluating the customer credit and country risk rating models by comparing them to relevant industry practices, considering the Bank's business environment; and (iv) assessing the macroeconomic variables used by the Bank by comparing them to publicly available information, considering current and potential COVID-19

— We involved credit risk professionals with specialized skills and knowledge, who assisted in: (i) testing a selection of the Bank's customer credit risk ratings by developing an independent rating using information related to the borrower's financial performance and conditions obtained from the Bank and from independent sources and comparing to the Bank's rating; and (ii) evaluating the sources of repayment and

The accompanying notes are an integral part of these consolidated financial statements.

Banco Latinoamericano de Comercio Exterior, S. A. and Subsidiaries Notes to the consolidated financial statements

(Amounts expressed in thousands of U.S. dollars, unless otherwise indicated)

1. Corporate information

Banco Latinoamericano de Comercio Exterior, S. A. ("Bladex Head Office" and together with its subsidiaries "Bladex" or the "Bank"), headquartered in Panama City, Republic of Panama, is a specialized multinational bank established to support the financing of foreign trade and economic integration in Latin America and the Caribbean (the "Region"). The Bank was established pursuant to a May 1975 proposal presented to the Assembly of Governors of Central Banks in the Region, which recommended the creation of a multinational organization to increase the foreign trade financing capacity of the Region. The Bank was organized in 1977, incorporated in 1978 as a corporation pursuant to the laws of the Republic of Panama, and initiated operations on January 2, 1979. Under a contract law signed in 1978 between the Republic of Panama and Bladex, the Bank was granted certain privileges by the Republic of Panama, including an exemption from payment of income taxes in Panama.

The Bank operates under a general banking license issued by the National Banking Commission of Panama, predecessor of the Superintendence of Banks of Panama (the "SBP").

In the Republic of Panama, banks are regulated by the SBP through Executive Decree No. 52 of April 30, 2008, which adopts the unique text of Law Decree No. 9 of February 26, 1998, modified by Law Decree No. 2 of February 22, 2008. Banks are also regulated by resolutions and agreements issued by this entity. The main aspects of this law and its regulations include: the authorization of banking licenses, minimum capital and liquidity requirements, consolidated supervision, procedures for management of credit, liquidity and market risks, measures to prevent money laundering, the financing of terrorism and related illicit activities, and procedures for banking intervention and liquidation, among others.

Bladex Head Office's subsidiaries are the following:

- owned by Bladex Holdings Inc.
- Development Corp. is 100% owned by Bladex Head Office.
- factoring.

Bladex Head Office has an agency in New York City, USA (the "New York Agency"), which began operations on March 27, 1989. The New York Agency is principally engaged in financing transactions related to international trade, mostly the confirmation and financing of letters of credit for customers in the Region. The New York Agency also has authorization to book transactions through an International Banking Facility ("IBF").

The Bank has representative offices in Buenos Aires, Argentina; in Mexico City, Mexico; and in Bogota, Colombia, and has a representative license in Lima, Peru.

These consolidated financial statements were authorized for issue by the Board of Directors on February 9, 2021.

Bladex Holdings Inc. is a wholly owned subsidiary, incorporated under the laws of the State of Delaware. United States of America (USA), on May 30, 2000. Bladex Holdings Inc. has ownership in Bladex Representaçao Ltda.

Bladex Representação Ltda, incorporated under the laws of Brazil on January 7, 2000, acts as the Bank's representative office in Brazil. Bladex Representação Ltda. is 99.999% owned by Bladex Head Office and the remaining 0.001% is

Bladex Development Corp. was incorporated under the laws of the Republic of Panama on June 5, 2014. Bladex

BLX Soluciones, S.A. de C.V., SOFOM, E.N.R. ("BLX Soluciones") was incorporated under the laws of Mexico on June 13, 2014. BLX Soluciones is 99.9% owned by Bladex Head Office, and Bladex Development Corp. owns the remaining 0.1%. The company specializes in offering financial leasing and other financial products such as loans and Notes to the consolidated financial statements (Amounts expressed in thousands of U.S. dollars, unless otherwise indicated)

2. Basis of preparation of the consolidated financial statements

2.1 Statement of compliance

The consolidated financial statements of Banco Latinoamericano de Comercio Exterior, S. A. and its subsidiaries have been prepared in accordance with International Financial Reporting Standards ("IFRS") as issued by the International Accounting Standards Board ("IASB").

2.2 **Presentation currency**

All amounts presented in the consolidated financial statements and notes are expressed in United States of America dollars (US dollar), which is the functional currency of the Bank.

2.3 Basis of measurement

The consolidated financial statements have been prepared on the historical cost basis, except for the following items:

Items	Basis of measurement
Securities and other financial instruments at fair value through other comprehensive income	Fair value
Other financial instruments at fair value through profit or loss	Fair value
Financial assets and financial liabilities designated as hedged items in qualifying fair value hedging relationships	At amortized cost adjusted for the hedge risk components associated to the hedging relationship
Investment properties	Fair value

Basis of consolidation 2.4

The consolidated financial statements comprise the financial statements of Bladex and its subsidiaries. Bladex consolidates its subsidiaries from the date on which control is transferred to the Bank. All intercompany balances and transactions have been eliminated on consolidation. Specifically, the Bank controls an investee if, and only if, the Bank has the following elements:

- Power over the investee. Existing rights that give it the current ability to direct the relevant activities of the investee.
- Exposure or rights to variable returns from its involvement with the investee.
- The ability to use its power over the investee to affect its returns.

Generally, there is a presumption that a majority of voting rights results in control. To support this presumption and when the Bank has less than the majority of the voting or similar rights of an investee, the Bank considers all relevant facts and circumstances in assessing whether it has power over an investee, including:

- The contractual arrangement(s) with the other vote holders of the investee.
- Rights arising from other contractual arrangements.
- The Bank's voting rights and potential voting rights.

The Bank re-assesses whether or not it controls an investee if facts and circumstances indicate that there are changes to one or more of the three elements of control. The consolidation of the financial statements of a subsidiary begins when the Bank obtains control over the subsidiary and ceases when the Bank loses control of the subsidiary.

Profit or loss and each component of other comprehensive income ("OCI") are attributed to the equity holders of the Bank and to the non-controlling interests, even if this results in the non-controlling interests having a deficit balance. When necessary, adjustments are made to the financial statements of subsidiaries to bring their accounting policies in line with the Bank's accounting policies.

Banco Latinoamericano de Comercio Exterior, S. A. and Subsidiaries

Notes to the consolidated financial statements (Amounts expressed in thousands of U.S. dollars, unless otherwise indicated)

2. Basis of preparation of the consolidated financial statements (continued)

2.4 Basis of consolidation (continued)

A change in the ownership interest of a subsidiary, without a loss of control, is accounted for as an equity transaction. If the Bank loses control over a subsidiary, it derecognizes the related assets, liabilities, non-controlling interest and other components of equity, while any resulting gain or loss is recognized in profit or loss. Any investment retained in the former subsidiary is recognized at fair value.

The fair value of any investment retained in the former subsidiary at the date when control is lost is measured according IFRS 9 - "Financial Instruments", or where applicable, at cost on initial recognition of an investment in an associate or a joint venture.

3. Significant accounting policies

Significant accounting policies applied consistently by the Bank to all years presented in these consolidated financial statements, are presented as follows.

3.1 Foreign currency

Foreign currency transactions

For each entity, the Bank determines the functional currency; items, included in the consolidated financial statements of each entity, are measured using their respective functional currency.

Transactions and balances

Assets and liabilities of foreign subsidiaries, whose local currency is considered their functional currency, are translated into the reporting currency, US dollars, using month-end spot foreign exchange rates. The Bank uses monthly-averaged exchange rates to translate revenues and expenses from local functional currency into US dollars. The effects of those translation adjustments are reported as a component of other comprehensive income (loss) in the consolidated statement of changes in equity.

Non-monetary assets and liabilities that are measured at fair value in a foreign currency are translated into the functional currency at the exchange rate effective at the date on which fair value is determined. Non-monetary items that are measured based on historical cost in a foreign currency are translated using the exchange rate effective at the date of the transaction.

Transactions whose terms are denominated in a currency other than the functional currency, including transactions denominated in local currency of foreign entities whose functional currency is the US dollar, are recorded at the exchange rate prevailing at the date of the transaction. Assets and liabilities in foreign currency are translated into US dollars using month-end spot foreign exchange rates. The effects of translation of monetary assets and liabilities into US dollar are included in current year's earnings in the caption of "gain (loss) on financial instruments, net" in profit or loss.

Differences arising on settlement or translation of monetary items are recognized in profit or loss, except for monetary items that are designated as part of the hedge of the Bank's net investment in a foreign operation. These are recognized in accumulated other comprehensive income until the net investment is disposed of, at which time, the cumulative amount is reclassified to profit or loss. Tax charges and credits attributable to exchange differences on those monetary items are also recorded in accumulated other comprehensive income, if applicable.

When a foreign operation is disposed of in its entirety or partially such that control is lost, the cumulative amount in the translation reserve related to that foreign operation is reclassified to profit or loss as part of the gain or loss on disposal. If the Bank disposes of only part of its interest in a subsidiary that includes a foreign operation while retaining control, then the relevant proportion of the cumulative amount is attributed to non-controlling interest.

3. Significant accounting policies (continued)

3.2 Interests

Effective interest rate

Interest income and expense are recognized in profit or loss using the effective interest method. The 'effective interest rate' is the rate that exactly discounts estimated future cash payments or receipts through the expected life of the financial instrument to:

- The gross carrying amount of the financial asset; or
- The amortized cost of the financial liability.

When calculating the effective interest rate for financial instruments other than purchased or originated credit-impaired assets, the Bank estimates future cash flows considering all contractual terms of the financial instrument, but not the expected credit loss (ECL). For purchased or originated credit-impaired financial assets, a credit-adjusted effective interest rate is calculated using estimated future cash flows including ECL.

The calculation of the effective interest rate includes transaction costs and fees and points paid or received that are an integral part of the effective interest rate. Transaction costs include incremental costs that are directly attributable to the acquisition or issue of a financial asset or financial liability.

Amortized cost and gross carrying amount

The 'amortized cost' of a financial asset or financial liability is the amount at which the financial asset or financial liability is measured on initial recognition minus the principal repayments, plus or minus the cumulative amortization using the effective interest method of any difference between that initial amount and the maturity amount and, for financial assets, adjusted for any expected credit loss allowance. The 'gross carrying amount of a financial asset' is the amortized cost of a financial asset before adjusting for any expected credit loss allowance.

Methodology for calculation of interest income and expense

The effective interest rate of a financial asset or financial liability is calculated on initial recognition of a financial asset or a financial liability. In calculating interest income and expense, the effective interest rate is applied to the gross carrying amount of the asset, when the asset is not credit-impaired, or to the amortized cost of the liability. The effective interest rate is revised as a result of periodic re-estimation of cash flows of floating-rate instruments to reflect movements in market interest rates.

However, for financial assets that have become credit-impaired subsequent to initial recognition, interest income is calculated by applying the effective interest rate to the amortized cost of the financial asset. If the asset is no longer credit-impaired, then the calculation of interest income reverts to the gross basis.

For financial assets that were credit-impaired on initial recognition, interest income is calculated by applying the credit-adjusted effective interest rate to the amortized cost of the asset. The calculation of interest income does not revert to a gross basis, even if the credit risk of the asset improves.

Presentation

Interest income and interest expense calculated using the effective interest method presented in the consolidated statement of profit or loss includes:

Interest on financial assets and financial liabilities measured at amortized cost

- 3. Significant accounting policies (continued)
 - 3.4 Financial assets and liabilities
 - A. Date of recognition and initial measurement

The Bank initially recognizes loans, deposits, securities and financial liabilities on the trade date, the date that the Bank becomes a party to the contractual provisions of the instrument. This includes regular way trades: purchases or sales of financial assets that require delivery of assets within the time frame generally established by regulation or convention in the marketplace.

Recognized financial assets and financial liabilities are initially measured at fair value. Transaction costs that are directly attributable to the acquisition or issue of financial assets and financial liabilities, other than financial assets or financial liabilities at fair value through profit or loss (FVTPL), are added to or deducted from the fair value of the financial assets or financial liabilities, as appropriate, on initial recognition. Transaction costs directly attributable to the acquisition of financial assets or financial liabilities at FVTPL are recognized immediately in profit or loss.

Recognized financial assets and financial liabilities designated as hedged items in qualifying fair value hedging relationships are measured at amortized cost adjusted for the hedge risk components associated to the hedging relationship.

B. Classification

The Bank classifies its financial assets as subsequently measured at amortized cost, fair value through other comprehensive income or fair value through profit or loss based on the Bank's business model for managing the financial assets and the contractual cash flow characteristics of these financial assets, except for those designated as hedged items in qualifying fair value hedging relationships, which are measured at amortized cost adjusted for the hedge risk components associated to the hedging relationship.

A financial asset is measured at amortized cost if it meets both of the following conditions and is not designated as at fair value through profit or loss (FVTPL):

- The asset is held within a business model whose objective is to hold assets to collect contractual cash flows; and -
- The contractual terms of the financial asset give rise on specified dates to cash flows that are solely payment of principal and interest (SPPI).

A debt instrument is measured at fair value through other comprehensive income (FVOCI) only if it meets both of the following conditions and is not designated as at FVTPL:

- The asset is held within a business model whose objective is achieved by both collecting contractual cash flows and selling financial assets; and
- The contractual terms of the financial asset give rise on specified dates to cash flows that are SPPI

Unrealized gains or losses for financial assets at FVOCI are reported as net increases or decreases in other comprehensive income in the consolidated statement of changes in equity until realized. The gains or losses realized on the sale of securities, which are included in the gain (loss) on the sale of financial instruments, are determined individually for each instrument. Exchange gains or losses are recognized in gains or losses.

For an equity instrument designated as measured at FVOCI, the accumulated gain or loss previously recognized in other comprehensive income is not subsequently reclassified to profit or loss but is transferred within equity to retained earnings.

The rest of financial assets are classified at FVTPL, when the assessment of the financial instrument's contractual terms and the cash flows derived from it determine that the SPPI criteria is not meet for its classification at amortized cost or at fair value through other comprehensive income.

Banco Latinoamericano de Comercio Exterior, S. A. and Subsidiaries

Notes to the consolidated financial statements (Amounts expressed in thousands of U.S. dollars, unless otherwise indicated)

- 3. Significant accounting policies (continued)
 - 3.4 Financial assets and liabilities (continued)

However, the following irrevocable election / designation at initial recognition of a financial asset on an asset-by-asset basis may be made:

- income (loss); and
- if doing so eliminates or significantly reduces an accounting mismatch.

The Bank classifies all financial liabilities as subsequently measured at amortized cost, except for those liabilities designated as hedged items in qualifying fair value hedging relationships, which are measured at amortized cost adjusted for the hedge risk components associated to the hedging relationship.

C. Business model assessment

The Bank assesses the objective of the business model in which the financial asset is held at a portfolio level, because this reflects the way the business is managed, and information is provided to management. The information considers the following:

- cash flows through the sale of the assets;
- How the performance of the portfolio is evaluated and reported to the Bank's management;
- The risks that affect the performance of the business model and how those risks are managed;
- realized.

The Bank's Commercial business comprises primarily the loan portfolio that is held for collecting contractual cash flows. Sales of loans from theses portfolios are very infrequent and of a low volume.

Certain debt securities are held by the Bank's Treasury business whose objective is to hold assets to collect the contractual cash flows. These securities may be sold, but such sales are not expected to be more than infrequent. Additionally, certain other debt securities are held in separate portfolios within a business model whose objective is achieved by both collecting contractual cash flows and selling financial assets. Accordingly, such sales are comprehensive rather than incidental and consequently implies a higher frequency and volume of sale.

An assessment of the business model for managing financial assets is fundamental to the classification of a financial asset. The Bank determines the business model at a level that reflects how financial asset groups are managed together to obtain a particular business objective. The business model does not depend on management's intentions for an individual instrument; therefore, assessment of the business model is done at a higher level of aggregation rather than instrument by instrument.

It may irrevocably elect to present subsequent changes in fair value of an equity instrument that is neither held for trading nor contingent consideration recognized by an acquirer in a business combination, in other comprehensive

It may irrevocably designate a debt instrument that meets the amortized cost or at FVOCI criteria as measured at FVTPL

- The Bank's policies and objectives for the portfolio and the operation of those policies in practice. In particular, if the management's strategy focuses on earning contractual interest revenue, maintaining a particular interest rate profile, matching the duration of the financial assets to the duration of the liabilities that are funding those assets or realizing

- The frequency, volume and timing of sales in prior periods, the reason for such sales and its expectations about future sales activity. However, information about sales activity is not considered in isolation, but as part of an overall assessment of how the Bank's stated objective for managing the financial assets is achieved and how cash flows are Notes to the consolidated financial statements (Amounts expressed in thousands of U.S. dollars, unless otherwise indicated)

3. Significant accounting policies (continued)

3.4 Financial assets and liabilities (continued)

At the initial recognized financial asset, it is determined whether the newly recognized financial asset is part of an existing business model or whether it reflects the start of a new business model. The Bank reassesses its business model at each reporting date to determine whether business models have changed since the previous reporting date.

For the current and previous reporting periods, the Bank has not identified a change in its business models.

D. Assessment whether contractual cash flows are solely payments of principal and interest (SPPI)

For the purposes of this assessment, 'principal' is defined as the fair value of the financial asset on initial recognition. 'Interest' is defined as consideration for the time value of money and for the credit risk associated with the principal amount outstanding at a point in time and for other basic lending risks and costs as well as profit margin.

Contractual cash flows that are SPPI are consistent with a basic credit agreement. Contractual terms that originate risk exposure or volatility in the contractual cash flows that are not related to a basic credit agreement, such as exposure to changes in equity prices or commodity prices, do not give rise to contractual cash flows that are SPPI. An originated or an acquired financial asset can be a basic credit arrangement irrespective of whether it is a credit in its legal form.

In assessing whether the contractual cash flows are SPPI, the Bank considers the contractual terms of the instrument. This includes assessing whether the financial asset contains a contractual term that could change the timing or amount of contractual cash flows, so that it would not meet this condition. In making the assessment, the Bank considers the following:

- Contingent events that would change the amount and timing of cash flows;
- Leverage features;
- Prepayment and extension terms;
- Terms that limit the Bank's claim to cash flows from specified assets (e.g. non-recourse asset arrangements); and features that modify consideration of the time value of money (e.g. periodical reset of interest rates).

The Bank measures it's financial assets and liabilities at fair value through profit or loss, when the assessment of the financial instrument's contractual terms and the cash flows derived from it determines that the SPPI criteria is not meet for its classification at amortized cost or at fair value through other comprehensive income.

E. <u>Reclassification</u>

If the business model under which the Bank holds financial assets changes, the financial assets affected are reclassified. The classification and measurement requirements related to the new category apply prospectively from the first day of the first reporting period following the change in business model that results in reclassifying the Bank's financial assets.

During the current fiscal year and previous accounting period there was no change in the business models under which the Bank holds financial assets and therefore no reclassifications were made. Changes in contractual cash flows are considered under the accounting policy on modification and derecognition of financial assets described in the following paragraphs.

F. Derecognition of financial assets and financial liabilities

Financial assets

A financial asset (or, where applicable, a part of a financial asset or part of a group of similar financial assets) is derecognized when:

- The rights to receive cash flows from the asset have expired.
- The Bank has transferred its rights to receive cash flows from the asset and either has transferred substantially all risk and rewards of the asset or has neither transferred nor retained substantially all the risks and rewards of the asset but has transferred control of the asset.
- The Bank retains the right to receive cash flows from the asset but has assumed an obligation to pay the received cash flows in full without material delay to a third party under a 'pass-through' arrangement.

Banco Latinoamericano de Comercio Exterior, S. A. and Subsidiaries

Notes to the consolidated financial statements (Amounts expressed in thousands of U.S. dollars, unless otherwise indicated)

- 3. Significant accounting policies (continued)
 - 3.4 Financial assets and liabilities (continued)
 - F. Derecognition of financial assets and financial liabilities (continued)

Financial assets (continued)

that reflects the rights and obligations that the Bank has retained.

The Bank assesses the transfer of risks and benefits by comparing the entity's exposure, before and after the transfer, with the variation in the amounts and timing of the net cash flows of the transferred asset; additionally, the continued participation in a transferred financial asset is measured by the lowest value between the original carrying amount of the asset and the maximum amount of consideration that the Bank could be required to pay.

In derecognizing the financial asset, allowance for losses are deducted from the gross carrying amount of the financial asset; any accumulated gain or loss that has been recognised in other comprehensive income is recognised in the consolidated statement of profit or loss.

Any accumulated gain or loss recognized in other comprehensive income regarding equity instruments designated at fair value with changes in other comprehensive income is not recognized in the consolidated statement of profit or loss. Any interest in the transfer of a financial assets that qualifies for derecognition, booked or held by the Bank is recognized as a separate asset or liability.

The Bank enters into transactions whereby it transfers assets recognized on its consolidated statement of financial position but retains either all or substantially all the risks and rewards of the transferred asset or a portion of them. In such cases, the transferred assets are not derecognized. Examples of such transactions are securities lending and sale-and-repurchase transactions.

Financial liabilities

A financial liability is derecognized when the obligation under the liability is extinguished, when the obligation specified in the contract is discharged or cancelled or expires.

Where an existing financial liability is replaced by another from the same lender on substantially different terms, or the terms of an existing liability are substantially modified, such an exchange or modification is treated as an extinguishment of the original liability and the recognition of a new liability.

The difference between the carrying value of the original financial liability and the consideration paid, including any non-cash assets transferred or liabilities assumed, is recognized in profit or loss.

- When the Bank has transferred its rights to receive cash flows from an asset or has entered into a pass-through arrangement and has neither transferred nor retained substantially all the risks and rewards of the asset nor transferred control of the asset, the asset is recognized to the extent of the Bank's continuing involvement in the asset. In that case, the Bank also recognizes an associated liability. The transferred asset and the associated liability are measured on a basis

3. Significant accounting policies (continued)

- **3.4** Financial assets and liabilities (continued)
- G. Modified financial asset or liability

Financial assets

A modified financial asset is an instrument whose borrower is experiencing financial difficulties and the renegotiation constitutes a concession to the borrower. A concession may include modification of terms such as an extension of maturity date, reduction in the stated interest rate, rescheduling of future cash flows, and reduction in the face amount of the financial asset or accrued interest, among others.

When a financial asset is modified, the Bank assesses whether this modification results in derecognition. In accordance with the Bank's policies a modification results in derecognition when it gives rise to substantially different terms. To determine if the modified terms are substantially different from the original contractual terms the Bank considers the following:

- Qualitative factors, such as contractual cash flows after modification are no longer SPPI, change in currency or change of counterparty, the extent of change in interest rates, maturity or covenants. If these do not clearly indicate a substantial modification, then;
- A quantitative assessment is performed to compare the present value of the remaining contractual cash flows according to the original terms with the contractual cash flows of the revised terms; both amounts discounted at the original effective interest.

When the contractual terms of a financial asset are modified, and the modification does not result in derecognition, the Bank determines if the financial asset's credit risk has increased significantly since initial recognition by comparing:

- The remaining lifetime probability of default (PD) estimated based on data at initial recognition and the original contractual terms; with
- The remaining lifetime PD at the reporting date based on the modified terms.

In the renegotiation or modification of the contractual cash flows of the financial asset, the Bank shall:

- Continue with its current accounting treatment for the existing financial asset that has been modified.
- Record a modification gain or loss by recalculating the gross carrying amount of the financial asset as the present value of the renegotiated or modified contractual cash flows, discounted at the financial asset's original effective interest rate.
- Assess whether there has been a significant increase in the credit risk of the financial instrument, by comparing the risk of a default occurring at the reporting date (based on the modified contractual terms) and the risk of a default occurring at initial recognition (based on the original, unmodified contractual terms). The financial asset that is modified is not automatically considered to have a lower credit risk. The assessment should consider credit risk over the expected life of the asset based on historical and forward-looking information, including information about the circumstances that led to the modification. Evidence that the criteria for the recognition of lifetime expected credit losses are subsequently no longer met may include a history of up-to-date and timely payment in subsequent periods. A minimum period of observation will be necessary before a financial asset may qualify to return to a 12-month expected credit loss measurement.
- Make the appropriate quantitative and qualitative disclosures required for renegotiated or modified assets to reflect the nature and the effect of such modifications (including the effect on the measurement of expected credit losses) and how the Bank monitors these financial assets that have been modified.

The Bank recognizes a loss allowance for expected credit losses on a financial asset that is measured at amortized cost at each reporting date at an amount equal to the lifetime expected credit losses if the credit risk on that financial asset has increased significantly since initial recognition. If at the reporting date, the credit risk of that financial asset has not increased significantly since initial recognition, an entity shall measure the loss allowance for that financial asset at an amount equal to 12-month expected credit losses.

Banco Latinoamericano de Comercio Exterior, S. A. and Subsidiaries

Notes to the consolidated financial statements (Amounts expressed in thousands of U.S. dollars, unless otherwise indicated)

3. Significant accounting policies (continued)

3.4 Financial assets and liabilities (continued)

When the modification of a financial asset results in the derecognition of an existing financial asset and the subsequent recognition of a modified financial asset, the modified asset is considered a new financial asset, at the time of derecognition, the reserve for expected credit losses (ECL) is recalculated to determine the net carrying value of the asset at that date. The new financial asset will have an allowance for losses measured based on 12-month for expected credit losses except for rare cases where the new financial asset is considered to be impaired, because a high risk of default remains, which has not been reduced in the modification. The Bank monitors the credit risk of the modified or renegotiated financial assets by assessing qualitative and quantitative information, considering them in the same way as customers with expired status under new terms.

Financial Liabilities

The Bank derecognizes a financial liability when its terms are modified, and the cash flows of the modified liability are substantially different. The Bank considers that the terms of a modified financial liability are substantially different if the present value of the cash flows under the new terms, including any fees paid net of any fees received, discounted at the original effective interest rate presents a difference greater than 10% of the discounted present value of the cash flows still remaining from the original financial liability.

In this case, a new financial liability based on the modified terms is recognized at fair value. The difference between the carrying amount of the financial liability derecognized, and the consideration paid, is recognized in profit or loss. Consideration paid includes non-financial assets transferred, if any, and the assumption of liabilities, including the new modified financial liability.

If the modification of a financial liability is not accounted for as derecognition, then the amortized cost of the liability is recalculated by discounting the modified cash flows at the original effective interest rate and the resulting gain or loss is recognized in the consolidated financial statement of profit or loss. For floating-rate financial liabilities, the original effective interest rate used to calculate the modification gain or loss is adjusted to reflect current market terms at the time of the modification. Any costs and fees incurred are recognized as an adjustment to the carrying amount of the liability and amortized over the remaining term of the modified financial liability by re-computing the effective interest rate on the instrument.

H. Offsetting

Financial assets and financial liabilities are offset and the net amount presented in the statement of financial position when, and only when, the Bank currently has a legally enforceable right to set off the amounts and it intends either to settle them on a net basis or to realize the asset and settle the liability simultaneously. Generally, this is not the case with a contractual compensation agreement; therefore, related assets and liabilities are presented with their gross amounts in the consolidated statement of financial position.

Income and expenses are presented on a net basis only when permitted under IFRS Standards, or for gains and losses arising from a group of similar transactions.

I. Fair value measurement

Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction, between market participants at the measurement date or, in its absence, the most advantageous market to which the Bank has access at that date. The fair value of a liability reflects its non-performance risk.

When one is available, the Bank measures the fair value of an instrument using the quoted price in an active market for that instrument. A market is regarded as "active" if transactions for the asset or liability take place with sufficient frequency and volume to provide pricing information on an ongoing basis.

If there is no quoted price in an active market, then the Bank uses valuation techniques that maximize the use of relevant observable inputs and minimize the use of unobservable inputs. The chosen valuation technique incorporates all of the factors that market participants would take into account in pricing a transaction.

3. Significant accounting policies (continued)

3.4 Financial assets and liabilities (continued)

The best evidence of the fair value of a financial instrument on initial recognition is normally the transaction price -i.e. the fair value of the consideration given or received.

The Bank recognizes transfers between levels of the fair value hierarchy as of the end of the reporting period during which the change has occurred.

J. Allowances for losses on financial instruments

The allowances for losses on financial instruments are provided for losses derived from the expected credit losses, inherent in the loan portfolio, investment securities and loan commitments and financial guarantee contracts, using the reserve methodology to determine expected credit losses. Additions to the allowance for expected credit losses for financial instruments are recognized in profit or loss or in other comprehensive income depending on classification of the instrument. Incurred credit losses are deducted from the allowance, and subsequent recoveries are added. The allowance is also decreased by reversals of the allowance back to profit or loss. The allowance for expected credit losses for financial instruments at amortized cost is reported as a deduction of financial assets and, the allowance for expected credit losses on loan commitments and financial guarantee contracts, such as letters of credit and guarantees, is presented as a liability.

The Bank assigns to each exposure a risk rating which is defined using quantitative and qualitative factors that are indicative of the risk of loss. This rating is considered for purposes of identifying significant increases in credit risk. These factors may vary depending on the nature of the exposure and the type of borrower.

Each exposure will be assigned to a risk rating at the time of initial recognition based on the information available about the customer and the country. Exposures will be subject to continuous monitoring, which may result in the change of an exposure to a different risk rating.

The analysis of customer risk considers financial and operational factors, sector / industry, market and managerial, also considering the ratings of international rating agencies, quality of information and other elements of an objective nature, including projections on these indicators.

For the assignment of customer credit ratings, quantitative and qualitative criteria are applied, depending on whether the counterpart corresponds to a financial entity or a corporation, and broken down into several factors, which receive a weighting within the customer's rating.

In the analysis of the country risk, for the establishment of the rating, the assessment of quantitative and qualitative variables specific to the country under analysis is considered, as well as the regional and global macroeconomic environment, considering projections about the future performance of the country environment.

In general, there are three groups of quantitative factors that determine the analysis and that give rise to a quantitative rating of the country (changes in main economic indicators; external payment capacity and access to capital; performance of domestic credit and the financial system), which is later analyzed within the social-political framework of the country (qualitative factors) and may suffer some deterioration for the determination of the final country rating.

i) Measurement of expected credit losses

Calculation of reserve for expected credit losses for financial instruments is made based on the risk rating resulting from the Bank's internal model and considering, generally (certain exceptions apply), the worst among the country risk rating of the transaction and the customer risk rating.

Banco Latinoamericano de Comercio Exterior, S. A. and Subsidiaries

Notes to the consolidated financial statements (Amounts expressed in thousands of U.S. dollars, unless otherwise indicated)

3. Significant accounting policies (continued)

10	100	С	Exposure to custon suspension of pay restructuring agree among others.

⁽¹⁾ Probability of default

⁽²⁾ Credit rating by Moody's Investors Service.

In order to maintain periodical monitoring of the quality of the portfolio, customers and countries are reviewed within a time frequency ranging from 3 to 12 months, depending on the risk rating.

The Bank measures expected credit losses in a way that reflects: a) an unbiased and probability-weighted amount that is determined by evaluating a range of possible outcomes; b) time value of money; and c) reasonable and supportable information that is available without undue cost or effort at the reporting date about past events, current conditions and forecast of future economic conditions.

The expected credit loss model reflects the general pattern of deterioration or improvement in the credit quality of the financial instrument. The amount of ECL recognized as a loss allowance or provision depends on the extent of credit deterioration since initial recognition. There are two measurement bases:

- significant increase in credit quality, and
- on a gross basis.

Description

omers or countries with payment ability to satisfy their financial

omers or countries with payment ability to satisfy their financial with more frequent reviews.

omers whose primary source of payment (operating cash flow) is ho show evidence of deterioration in their working capital that does satisfy payments on the agreed terms, or in countries where the ertain risks.

mers whose operating cash flow continuously shows insufficiency to n the originally agreed terms, or in countries where the operation is ed to certain terms, structure and types of credits.

mers with operating cash flows that do not cover their costs, are in yments, presumably will also have difficulties fulfilling possible ements, are in a state of insolvency, or have filed for bankruptcy,

- Stage 1: 12-month ECL, which applies to all financial instruments (from initial recognition) as long as there is no

Stage 2 and 3: Lifetime ECL, which applies when a significant increase in credit risk has occurred on an individual or collective basis. In Stages 2 and 3 interest income is recognized. Under Stage 2 (as under Stage 1), there is a full decoupling between interest recognition and impairment and interest income is calculated on the carrying amount. Under Stage 3, when a financial asset subsequently becomes credit impaired (when a credit event has occurred), interest income is calculated on the amortized cost, net of impairment, i.e. the gross carrying amount after deducting the impairment allowance. In subsequent reporting years, if the credit quality of the financial asset improves so that the financial asset is no longer credit-impaired, and the improvement can be related objectively to the occurrence of an event (such as an improvement in the borrower's credit rating), then the Bank will once again calculate interest income

3. Significant accounting policies (continued)

3.4 Financial assets and liabilities (continued)

The allowance for expected credit losses includes an asset-specific component and a formula-based component. The assetspecific component, or specific allowance, relates to the provision for losses on credits considered impaired and measured individually case-by-case. A specific allowance is established when the discounted cash flows (or observable fair value of collateral) of the credit are lower than the carrying value of that credit. The formula-based component (collective assessment basis), covers the Bank's performing credit portfolio and it is established based on a process that estimates the probable loss inherent in the portfolio, based on statistical analysis and management's qualitative judgment. This assessment considers comprehensive information that incorporates not only past-due data, but other relevant credit information, such as forward looking macro-economic information.

ECL are a probability-weighted estimate of the present value of credit losses. These are measured as the difference in the present value of the cash flows due to the Bank under the contract and the cash flows that the Bank expects to receive arising from weighing of multiple future economic scenarios, discounted at the asset's effective interest rate (EIR). For undrawn loan commitments, the ECL is the difference between the present value of the contractual cash flows that are due to the Bank if the holder of the commitment draws down the loan and the cash flows that the Bank expects to receive if the loan is drawn down; and for financial guarantee contracts, the ECL is the difference between the expected payments to reimburse the holder of the guaranteed debt instrument less any amounts that the Bank expects to receive from the holder, the debtor or any other party.

The Bank determines ECL using two methodologies to determine if there is objective evidence of impairment for financial instruments:

- Individually Assessed

The expected credit losses on individually assessed financial instruments are determined by an evaluation of the exposures on a case-by-case basis. This procedure is applied to all credit transactions that are individually significant or not. If it is determined that there is no objective evidence of impairment for an individual credit transaction, it is included in a group of credit transactions with similar characteristics and is collectively assessed to determine whether there is impairment.

The impairment loss is calculated by comparing the present value of the future expected flows, discounted at the original effective rate of the credit transaction, with its current carrying amount and the amount of any loss is charged as a provision for losses in profit or loss for those measured at amortized cost, and in equity for those operations measured at fair value through other comprehensive income.

- Collectively Assessed

For the purposes of a collective assessment of impairment, financial instruments are grouped according to similar credit risk characteristics. These characteristics are relevant to estimate cash flows for the groups of such assets, being indicative of the debtors' ability to pay the amounts owed according to the contractual terms of the assets that are assessed.

Future cash flows in a group of credit transactions that are collectively assessed to determine whether there is impairment are estimated according to the contractual cash flows of the assets in the group, the historical loss experience for assets with similar credit risk characteristics, within each group, and the experienced management views on whether the current economy and credit conditions can change the real level of historical inherent losses suggested.

ii) Definition of Default

The Bank considers a financial asset to be in default when it presents any of the following characteristics:

- The debtor is past due for more than 90 days in any of its obligations to the Bank, either in the loan principal or interest; or when the principal balance with one single balloon payment was due for more than 30 days;
- Deterioration in the financial condition of the customer, or the existence of other factors allowing to estimate the possibility that the balance of principal and interest on customers' loans will not be fully recovered.

Banco Latinoamericano de Comercio Exterior, S. A. and Subsidiaries

Notes to the consolidated financial statements (Amounts expressed in thousands of U.S. dollars, unless otherwise indicated)

3. Significant accounting policies (continued)

3.4 Financial assets and liabilities (continued)

The above presumptions regarding past due loans may be rebuttable if the Bank has reasonable and supportable information that is available without undue cost or effort, that demonstrate that the credit risk has not increased significantly since initial recognition even though the contractual payments are more than 30 or 90 days past due.

In assessing whether a borrower is in default, the Bank considers qualitative and quantitative indicators based on data internally developed and obtained from external sources. Inputs into the assessment of whether a financial instrument is in default and their significance may vary over time to reflect changes in circumstances.

iii) Significant increase in credit risk

When assessing whether the credit risk on a financial instrument has increased significantly, the Bank considers the change in the risk of default occurring since initial recognition. For a financial instrument to be considered in default, management considers criteria used in the internal credit risk model and qualitative factors, such as financial covenants, where appropriate.

The Bank continuously assesses significant increases in credit risk based on the change in the risk of a default occurring over the expected life of the credit instrument. In order to make the assessment of whether there has been significant credit deterioration, the Bank considers reasonable and supportable information that is available without undue cost or effort by comparing:

- The risk of a default occurring on the financial instrument at the assessment date, and
- The risk of a default occurring on the financial instrument at initial recognition.

For loan commitments, the Bank considers changes in the risk of a default occurring on the 'potential' financial instrument to which a loan commitment relates, and for financial guarantee contracts, changes in the risk that the specified debtor will default, are taken into consideration.

For financial instruments measured at fair value through OCI, the expected credit losses do not reduce the carrying amount in the consolidated statement of financial position, which remains at fair value. Instead, an amount equal to the allowance that would arise if the asset was measured at amortized cost is recognized in profit or loss as the impairment amount. Impairment losses or recoveries are accounted for as an adjustment to the reserve in accumulated other comprehensive income, against profit or loss.

Additionally, to determine if there has been a significant increase in risk, the Bank applies an alert model that considers the international economic environment, the specific financial situation by country and the economic analysis of the industry where the customer generates its income. The model defines a consolidated calculation of risk severity depending on the weighing of the severity to risk of each one of the scenarios under analysis. Also, this depends on the context of the variables or the ratings constructed for each one (by market, country and economic sector).

Impairment on a financial asset is assessed based on numerous factors and its relative importance varies on a case-by-case basis. Factors considered in determining whether there has been a negative impact on the estimated future cash flows of a financial asset include: significant financial difficulties of the issuer; high probability of default; granting a concession to the issuer; disappearance of an active market due to financial difficulties; breach of contract, such as defaults or delays in principal or interest; and, observable data indicating that there is a measurable decrease in estimated future cash flows since initial recognition.

If a security is no longer publicly traded or the entity's credit rating is downgraded, this is not, by itself, evidence of impairment, but should be considered for impairment together with other information. A decline in the fair value of an investment security below its amortized cost is not necessarily evidence of impairment, as it may be due to an increase in market interest rates. Whether a decline in fair value below cost is considered significant or prolonged, must be assessed on an instrument-byinstrument basis and should be based on both qualitative and quantitative factors. However, the assessment of prolonged decline should not be compared to the entire period that the investment has been or is expected to be held.

Notes to the consolidated financial statements *(Amounts expressed in thousands of U.S. dollars, unless otherwise indicated)*

3. Significant accounting policies (continued)

3.4 Financial assets and liabilities (continued)

In order to determine whether there has been a significant increase in the credit risk of the financial instrument, the assessment is based on quantitative information and qualitative information.

The Bank considers the following factors, among others, when measuring significant increase in credit risk:

- Significant changes in internal indicators of credit risk as a result of a change in credit risk since inception;
- Significant changes in market indicators of credit risk for a particular financial instrument or similar financial instruments with the same expected life;
- An actual or expected significant change in the financial instrument's external credit rating;
- Existing or forecast adverse changes in business, financial or economic conditions;
- An actual or expected significant change in the operating results of the borrower;
- An actual or expected significant adverse change in the regulatory, economic, or technological environment of the borrower;
- Significant changes in the value of the collateral supporting the obligation;
- Significant changes, such as reductions in financial support from a parent entity or other affiliate or an actual or expected significant change in the quality of credit enhancements, among other factors incorporated in the Bank's ECL model.

Additionally, management also applies complementary judgment to capture elements of prospective nature or loss expectations based on risks identified in the environment that are not necessarily reflected in the historical data.

The reserve balances for expected credit losses, for credit exposures, are calculated applying the following formula:

Reserves = $\sum (E \times PD \times LGD)$; where:

- Exposure (E) = the total accounting balance at the end of the period under review.
- Probabilities of Default (PD) = one-year probability of default applied to the portfolio to account for 12-month ECL and lifetime probability of default to account for more than 12-month ECL. Default rates are based on Bladex's historical portfolio performance per rating category, in addition to international rating agency's probabilities of default for categories 6, 7 and 8, in view of the greater robustness of data for such cases.
- Loss Given Default (LGD) = a factor is applied, based on historical information, as well as best practices in the banking industry, volatility and simulated scenarios based on forward-looking information. Management applies judgment and historical loss experience.

K. Write-offs

Loans and debt securities are written off (either partially or in full) when there is no reasonable expectation of recovering a financial asset in its entirety or a portion thereof. This is generally the case when the Bank determines that the borrower does not have assets or sources of income that could generate enough cash flows to repay the amounts subject to the write-off. Nevertheless, the financial assets that are written off could still be subject to enforcement activities in order to comply with the Bank's procedures for recovery of amounts due.

Recoveries of amounts previously written off are recognized when cash is received in the allowance for losses as mentioned in Note 3.4 (J).

Banco Latinoamericano de Comercio Exterior, S. A. and Subsidiaries

Notes to the consolidated financial statements (Amounts expressed in thousands of U.S. dollars, unless otherwise indicated)

3. Significant accounting policies (continued)

3.5 Derivative financial instruments for risk management purposes and hedge accounting

Derivatives held for risk management purposes include all derivative assets and liabilities that are not classified as trading assets or liabilities. Derivatives held for risk management purposes are measured at fair value in the consolidated statement of financial position. Derivatives are initially recognized at fair value at the date a derivative contract is entered into and are subsequently remeasured to their fair value at each reporting date. The resulting gain/loss is immediately recognized in profit or loss unless the derivative is designated and effective as a hedging instrument, in which event the timing of the recognition in profit or loss depends on the nature of the hedging relationship.

Applicable standards for all hedging relationships

On initial designation of the hedge, the Bank formally documents the relationship between the hedging instrument(s) and hedged item(s), including the risk management objective and strategy in undertaking the hedge, together with the method that will be used to assess the effectiveness of the hedging relationship. The Bank makes an assessment, both at inception of the hedging relationship and on an ongoing basis, of whether the hedging instrument(s) is(are) expected to be highly effective in offsetting the changes in the fair value or cash flows of the respective hedged item(s) during the period for which the hedge is designated.

The Bank uses derivative financial instruments for its management of interest rate and foreign currency risks. Interest rate swap contracts, cross-currency swap contracts and foreign exchange forward contracts have been used to manage interest rate and foreign exchange risks respectively associated with debt securities and borrowings with fixed and floating rates, and loans and borrowings in foreign currency.

These derivatives contracts can be classified as fair value and cash flow hedges. In addition, foreign exchange forward contracts are used to hedge exposures to changes in foreign currency in subsidiary companies with functional currencies other than the US dollar. These contracts are classified as net investment hedges.

The accounting for changes in value of a derivative depends on whether the contract is for trading purposes or has been designated and qualifies for hedge accounting.

Derivatives held for trading purposes include interest rate swaps, cross-currency swaps and foreign exchange forward contracts used for risk management purposes that do not qualify for hedge accounting. These derivatives are reported as asset or liabilities, as applicable. Changes in realized and unrealized gains and losses from these financial instruments are recognized as gains or losses on financial instruments.

Derivatives for hedging purposes primarily include foreign exchange forward contracts and interest rate swap contracts in US dollars and cross-currency swaps. Derivative contracts designated and qualifying for hedge accounting are reported in the consolidated statement of financial position as derivative financial instruments used for hedging - assets and liabilities, as applicable; and hedge accounting is applied. In order to qualify for hedge accounting, a derivative must be considered highly effective at reducing the risk associated with the exposure being hedged. Each derivative must be designated as a hedge, with documentation of the risk management objective and strategy, including identification of the hedging instrument, the hedged item and the risk exposure, as well as how effectiveness will be assessed prospectively. The hedging instrument should be qualitatively assessed on a quarterly basis in order to determine its effectiveness at achieving offsetting changes in fair value or cash flows. Any ineffectiveness must be reported in current-year profit or loss.

i) <u>Hedge accounting relationship</u>

As the Bank enters into a hedge accounting relationship, the first requirement is that the hedging instrument and the hedged item must be expected to move in the opposite direction as a result of the change in the hedged risk. This should be based on an economic rationale, as could be the case if the relationship is based only on a statistical correlation. This requirement is fulfilled for many of the hedging relationships carried by the Bank as the underlying of the hedging instrument matches or is closely aligned with the hedged risk. Even when there are differences between the hedged item and the hedging instrument, the economic relationship will often be capable of being demonstrated using a qualitative assessment. The assessment, whether qualitative or quantitative, considers the following: a) maturity; b) nominal amount; c) cash flow dates; d) interest rate basis; and e) credit risk, including the effect of collateral, among others.

28

3. Significant accounting policies (continued)

3.5 Derivative financial instruments for risk management purposes and hedge accounting (continued)

ii) Hedge ratio

The hedge ratio is the ratio between the amount of hedged item and the amount of the hedging instrument. For most of the hedging relationships, the hedge ratio is 1:1 as the underlying of the hedging instrument perfectly matches the designated hedged risk. For a hedging relationship with a correlation between the hedged item and the hedging instrument that is not 1:1 relationship, the hedge ratio is generally set so as to adjust for the type of relation in order to improve effectiveness.

Discontinuation of hedge accounting iii)

The Bank discontinues hedge accounting prospectively in the following situations:

- 1. It is determined that the derivative is no longer effective in offsetting changes in the fair value or cash flows of a hedged item.
- 2. The derivative expires or is sold, terminated or exercised.
- It is determined that designation of the derivative as a hedging instrument is no longer appropriate. 3.

The Bank carries all derivative financial instruments in the consolidated statement of financial position at fair value.

Fair value hedges

When a derivative is designated as the hedging instrument in a hedge of the change in fair value of a recognized asset or liability or a firm commitment that could affect profit or loss, changes in the fair value of the derivative are recognized in profit or loss together with changes in the fair value of the hedged item that are attributable to the hedged risk, except when the hedging instrument hedges an equity instrument designated at FVOCI in which case it is recognized in OCI. The carrying amount of a hedged item not already measured at fair value is adjusted in profit or loss for the fair value change attributable to the hedged risk. For debt instruments measured at FVOCI, the carrying amount is not adjusted as it is already at fair value, but the part of the fair value on the hedged item associated with the hedged risk is recognized in profit or loss instead of OCI. When the hedged item is an equity instrument designated at FVOCI, the hedging gain/loss remains in OCI to match that of the hedging instrument.

If the hedge relationship is terminated or exercised, or the hedge no longer meets the criteria for fair value hedge accounting, or the hedge designation is revoked, then hedge accounting is discontinued prospectively and the fair value adjustment to the hedged item continues to be reported as part of the basis of the item and is amortized to earnings as a yield adjustment where hedging gains/losses are recognized in profit or loss; they are recognized in the same line as the hedged item.

Cash flow hedges

When a derivative is designated as the hedging instrument in a hedge of variability in cash flows attributable to a particular risk associated with a recognized asset or liability that could affect profit or loss, the effective portion of changes in the fair value of the derivative is recognized in OCI and recognized in profit or loss when the hedged cash flows affect earnings. The ineffective portion is recognized in profit or loss as loss on financial instruments, net. If the cash flow hedge relationship is terminated or exercised, or the hedge no longer meets the criteria for fair value hedge accounting, or the hedge designation is revoked, then hedge accounting is discontinued prospectively and the related amounts in OCI are reclassified into profit or loss when hedged cash flows occur.

Net investment hedges

When a derivative instrument or a non-derivative financial item is designated as the hedging instrument in a hedge of a net investment in a foreign operation, the effective portion of changes in the fair value of the hedging instrument is recognized in OCI and presented in the translation reserve within equity. Any ineffective portion of the changes in the fair value of the derivative is recognized in profit or loss. The amount recognized in OCI is reclassified to profit or loss as a reclassification adjustment when disposal of the foreign operation occurs.

Banco Latinoamericano de Comercio Exterior, S. A. and Subsidiaries

Notes to the consolidated financial statements (Amounts expressed in thousands of U.S. dollars, unless otherwise indicated)

3. Significant accounting policies (continued)

3.6 Cash and due from banks

Cash equivalents include demand deposits in banks and interest-bearing deposits in banks with original maturities of three months or less, excluding pledged deposits.

3.7 Loans

Loans reported in the consolidated statement of financial position include:

- Loans at amortized cost
- Loans measured at fair value through profit or loss

Loans at amortized cost consider the principal outstanding amounts and interest receivable net of unearned interest, deferred fees and allowance for expected credit losses. The loans recognized and designated as hedged items in qualifying fair value hedging relationships, are measured at amortized cost adjusted for the hedge risk components associated to the hedging relationship. Purchased loans are recorded at acquisition cost. The difference between the outstanding amount and the acquisition cost of loans, premiums and discounts, is amortized over the life of the loan as an adjustment to the yield. All other costs related to acquisition of loans are also reflected as an adjustment to the yield and are expensed when incurred.

Loans measured at FVTPL arise as the result of the assessment of the financial instrument's contractual terms and it is determined that the cash flows derived from the evaluated instrument do not meet with the SPPI criteria for its classification at amortized cost or at fair value through other comprehensive income.

3.8 Securities and other financial assets

Securities and other financial assets caption in the consolidated statement of financial position includes:

- Debt and equity investment securities measured at FVOCI; and
- Debt investment securities measured at FVTPL -

3.9 Deposits, borrowings and repurchase agreements

Liability deposits, borrowings and debt are accounted for at amortized cost, except for those designated as hedged items in qualifying fair value hedging relationships, which are measured at amortized cost adjusted for the hedge risk components associated to the hedging relationship.

Repurchase agreements are transactions in which the Bank sells a security and simultaneously agrees to repurchase that security (or an asset that is substantially identical) at a fixed price on a future date. The Bank continues to recognize the securities in their entirety in the consolidated statement of financial position because it retains substantially all the risks and rewards of ownership. The cash consideration received is recognized as a financial asset and a financial liability is recognized for the obligation to pay the repurchase price.

Because in the repurchase agreements the Bank sells the contractual rights to the cash flows of the securities, it does not have the ability to use the transferred assets during the term of the arrangement.

- Debt investment securities measured at amortized cost; these are initially measured at fair value plus incremental direct transaction costs, and subsequently at their amortized cost using the effective interest method;

Notes to the consolidated financial statements (*Amounts expressed in thousands of U.S. dollars, unless otherwise indicated*)

3. Significant accounting policies (continued)

3.10 Loan commitments and financial guarantee contracts

Letters of credit, stand-by letters of credit and guarantees

The Bank, on behalf of its client's base, issues, confirms and advises letters of credit to facilitate foreign trade transactions. When issuing, confirming and advising letters of credit, the Bank adds its own unqualified assurance that the Bank will pay upon presentation of complying documents as per the terms and conditions established in the letter of credit. The Bank also issues, confirms and advises stand-by letters of credit and guarantees, which are issued on behalf of institutional clients in connection with financing between its clients and third parties. The Bank applies the same credit policies used in its lending process, and once the commitment is issued, it becomes irrevocable and remains valid until its expiration upon the presentation of complying documents on or before the expiry date.

Credit commitments

Commitments to extend credit are binding legal agreements to lend to customers. Commitments generally have fixed expiration dates or other termination clauses and require payment of a fee to the Bank. As some commitments expire without being drawn down, the total commitment amounts do not necessarily represent future cash requirements.

3.11 Leases

At inception of a contract, the Bank assesses whether a contract is, or contains, a lease. A contract is, or contains, a lease if the contract conveys the right to control the use of an identified asset for a period of time in exchange for consideration. To assess whether a contract conveys the right to control the use of an identified asset, the Bank assesses whether:

- The contract involves the use of an identified asset –this may be specified explicitly or implicitly; and should be physically distinct or represent substantially all of the capacity of a physically distinct asset.
- The Bank has the right to obtain substantially all of the economic benefits from use of the asset throughout the period of use.
- The Bank has the right to direct the use of the asset. The Bank has this right when it has the decision-making rights that are most relevant to changing how and for what purpose the asset is used. In rare cases where the decision about how and for what purpose the asset is used is predetermined, the Bank has the right to direct the use of the asset if either:
 - The Bank has the right to operate the asset; or
 - The Bank designed the asset in a way that predetermines how and for what purpose it will be used.

At inception or on reassessment of a contract that contains a lease component, the Bank allocates the consideration in the contract to each lease component on the basis of their relative stand-alone prices. However, for lease agreements of office spaces in buildings in which the Bank is a lessee, it chose not to separate the components of the contract that do not correspond to the lease and to account for all of them under a single lease component.

The details of the lease policy are described as follows:

A. Definition of a lease

The Bank determines at the beginning of the contract if an agreement is or contains a lease according to IFRS 16. The Bank assesses if a contract is or contains a lease based on the definition of a lease.

Banco Latinoamericano de Comercio Exterior, S. A. and Subsidiaries

Notes to the consolidated financial statements (*Amounts expressed in thousands of U.S. dollars, unless otherwise indicated*)

3. Significant accounting policies (continued)

3.11 Leases (continued)

B. As a lessee

The Bank recognizes right-of-use assets and lease liabilities for most leases. These leases are presented in the consolidated statement of financial position. Lease liabilities are measured at the present value of the lease payments, discounted at the Bank's internal funding cost rate. The right-of-use assets are measured at their book value, by discounting total lease payments to present value using the Bank's internal funding cost rate, for the weighted average term of the contract, adjusted for any prepayment, incremental cost, dismantling cost and accumulated depreciation.

The right-of-use asset is subsequently depreciated using the straight-line method from the inception date until the end of the lease term. In addition, the right-of-use asset is periodically reduced by impairment losses, if applicable, and is adjusted for certain new measurements of the lease liability. The Bank presents its right of use assets in equipment and improvements to the leased property and the liability for lease in obligations and debt, net in the consolidated statement of financial position.

C. <u>As a sublessor</u>

Sub-leases of assets for rights of use are classified as operating leases. The subleased portion is classified as investment property, which is subsequently measured by applying the cost model. Leases receivable are recognized as income in the consolidated statement of profit or loss in the period in which they are earned.

The Bank applied IFRS 15 to revenue from contracts with customers to assign the consideration in the contract to each lease component and that is not a lease.

D. Investment properties - Right of use

Rights-of-use assets that the Bank holds under sublease agreements for the purpose of obtaining lease income are classified as investment properties in the consolidated statement of financial position. These assets are measured at initial recognition using the same criteria used to recognize other rights-of-use assets. After initial recognition, the carrying amount of these assets is amortized on a straight-line basis over their life. The estimated useful life of these investment properties is closely related to the principal lease agreement.

3.12 Equipment and leasehold improvements

Equipment and leasehold improvements are stated at cost excluding the costs of day-to-day maintenance, less accumulated depreciation and impairment losses. Changes in the expected useful life are accounted for by changing the amortization period or method, as appropriate, and treated as changes in accounting estimates.

Depreciation is calculated using the straight-line method to write down the cost of assets and equipment to their residual values over their estimated useful lives. The estimated useful lives are as follows:

Furniture and equipment Hardware Other equipment Leasehold improvements

Leasehold improvements, under operating leases are amortized on a straight-line basis calculated without exceeding the length of the respective lease contracts.

Useful life in years 3 to 5 years 3 years 2 to 4 years 3 to 15 years or up to the lease term Notes to the consolidated financial statements *(Amounts expressed in thousands of U.S. dollars, unless otherwise indicated)*

3. Significant accounting policies (continued)

3.12 Equipment and leasehold improvements (continued)

Equipment and leasehold improvements include right of use of assets arising from the lease policy. Regarding the recognition and subsequent measurement for lease contracts are set out in Note 3.11.

Equipment and leasehold improvements are derecognized on disposal or when no future economic benefits are expected from their use. Any gain or loss arising on derecognition of the asset (calculated as the difference between the net disposal proceeds and the carrying amount of the asset) is recognized in other income or other expenses in profit or loss in the year that the asset is derecognized.

3.13 Investment property

Properties that are held with the intention of generating a return from rental, capital appreciation or both, as well as right-of-use assets recognized under IFRS 16 that the Bank holds under sublease agreements and that are not occupied by the Bank, are classified as investment properties in the consolidated statement of financial position and are initially measured at cost, including all transaction-related costs and, where applicable, costs associated with financing.

After initial recognition, investment properties are measured at fair value, except for those investment properties – right of use recognized under IFRS 16 that the Bank holds under sublease agreements which are subsequentlymeasured in accordance with IFRS 16.

Fair value is based on market prices, adjusted, if necessary, for differences in the nature, location or condition of the specific asset. If this information is not available, the Bank uses alternative valuation methods, such as recent prices on less active markets or discounted cash flow projections. Valuations are performed as of the reporting date by professional appraisers who hold recognized and relevant professional qualifications and have recent experience in the location and category of the investment property being valued. These valuations form the basis for the carrying amounts in the consolidated financial statements.

The fair value of investment property reflects, among other things, rental income from current leases and other assumptions market participants would make when pricing the property under current market conditions.

Subsequent expenditure is capitalized to the asset's carrying amount only when it is probable that future economic benefits associated with the expenditure will flow to the Bank and the cost of the item can be measured reliably.

All other repairs and maintenance costs are expensed when incurred. When part of an investment property is replaced, the carrying amount of the replaced part is derecognized.

Changes in fair value are recognized in profit or loss. Investment property is derecognized when disposed of.

When the Bank disposes of a property at fair value in an arm's length transaction, the carrying value immediately prior to the sale is adjusted to the transaction price, and the adjustment is recorded in profit or loss as gain (loss) on non-financial assets.

If an investment property becomes owner-occupied, it is reclassified as property, plant and equipment. Its fair value at the date of reclassification becomes its cost for subsequent accounting purposes.

Banco Latinoamericano de Comercio Exterior, S. A. and Subsidiaries

Notes to the consolidated financial statements (Amounts expressed in thousands of U.S. dollars, unless otherwise indicated)

3. Significant accounting policies (continued)

3.14 Intangible assets

An intangible asset is recognized only when its cost can be measured reliably, and it is probable that the expected future economic benefits that are attributable to it will flow to the Bank.

The useful lives of intangible assets are assessed to be either finite or indefinite. Intangible assets with finite useful lives are amortized using the straight-line method over the estimated useful lives of the assets. Changes in the expected useful life or the expected pattern of consumption of future economic benefits embodied in the asset are accounted for by changing the amortization period or method, as appropriate, and they are treated as changes in accounting estimates. The amortization expense on intangible assets with finite lives is presented as a separate line item in profit or loss.

Bank's intangible assets include the cost of computer software. Amortization is calculated using the straight–line method to write down the cost of intangible assets to their residual values over their estimated useful lives of 5 years. Gains or losses arising from the derecognition of an intangible asset are determined by the Bank as the difference between proceeds from the sale or disposal and the net carrying amount of the intangible asset and recognized in profit or loss for the year in which the transaction occurs.

3.15 Impairment of non-financial assets

A non-financial asset is impaired when an entity will not be able to recover that asset's carrying value, either through its use or sale. If circumstances arise which indicate that a non-financial asset might be impaired, a review should be undertaken of its cash generating abilities through use or sale. This review will produce an amount which should be compared with the asset's carrying value, and if the carrying value is higher, the difference must be written off as impairment in profit or loss. On the other hand, if there is any indication that previously recognized impairment losses may no longer exist or may have decreased, the Bank makes an estimate of the recoverable amount. In that case, the carrying amount of the asset is increased to its recoverable amount. This increase cannot exceed the carrying amount that would have been determined, net of depreciation or amortization, had no impairment loss been recognized for the asset in prior years. Such reversal is recognized in profit or loss.

3.16 Provisions

Provisions are recognized when the Bank has a present obligation (legal or constructive) as a result of a past event, and it is probable that an outflow of resources embodying economic benefits will be required to settle the obligation and a reliable estimate can be made of the amount of the obligation. The expense relating to any provision is presented in profit or loss, net of any reimbursement.

3.17 Share-based payments

Compensation cost is based on the grant date fair value of both stock and options and is recognized over the requisite service period of the employee. The fair value of each option is estimated at the grant date using a binomial option-pricing model. When stocks options and restricted stock units vested are exercised, the Bank's policy is to sale treasury stock.

3.18 Equity

<u>Reserves</u>

Regulatory and capital reserves are established as appropriations from retained earnings and, as such, form part of retained earnings. Additions and reductions of regulatory and capital reserves require the approval of the Bank's Board of Directors and the SBP, as applicable.

3. Significant accounting policies (continued)

3.18 Equity (continued)

Other capital reserves, presented as other comprehensive income include:

- Translation reserve: The translation reserve comprises all foreign currency differences arising from the translation of the consolidated financial statements of foreign operations when the functional currency of the foreign operation is other than the US dollar, as well as the effective portion of any foreign currency differences arising from hedges of a net investment in a foreign operation.
- Hedging reserve: The hedging reserve comprises the effective portion of the cumulative net change in the fair value of hedging instruments used in cash flow hedges pending subsequent recognition in profit or loss as the hedged cash flows affect profit or loss.
- Fair value reserve: The fair value reserve comprises the cumulative net change in the fair value of investment securities measured at FVOCI, less the ECL allowance recognized in profit or loss.

Treasury stock and contracts on own shares

The own equity instruments of the Bank which are acquired by it or by any of its subsidiaries (treasury stock) are deducted from equity and accounted for at weighted average cost. Consideration paid or received on the purchase, sale, issue or cancellation of the Bank's own equity instruments is recognized directly in equity.

No gain or loss is recognized in profit or loss on the purchase, sale, issue or cancellation of own equity instruments, but is recognized directly in equity.

3.19 Earnings per share

Basic earnings per share is computed by dividing the profit for the year (the numerator) by the weighted average number of common shares outstanding (the denominator) during the year. Diluted earnings per share measure performance incorporating the effect that potential common shares, such as stock options and restricted stock units outstanding during the same period, would have on earnings per share. The computation of diluted earnings per share is similar to the computation of basic earnings per share, except for the denominator, which is increased to include the number of additional common shares that would have been issued if the beneficiaries of stock purchase options and restricted stock units plans could exercise their options.

3.20 Taxes

Income taxes

Current tax assets and liabilities for the current and prior years are measured at the amount expected to be recovered from or paid to the taxation authorities. Tax laws and regulations used to compute the amount are those that are enacted or substantively enacted by the reporting date.

- Bladex Head Office is exempted from payment of income taxes in Panama in accordance with the contract law signed between the Republic of Panama and Bladex.
- Bladex Representacao Ltda. is subject to income taxes in Brazil.
- Bladex Development Corp. is subject to income taxes in Pana ma.
- BLX Soluciones, S.A. de C.V., SOFOM, is subject to income taxes in Mexico.
- The New York Agency and Bladex Holdings, Inc. incorporated in USA are subject to federal and local taxation in USA based on the portion of income that is effectively connected with its operations in that country.

Current and deferred tax

The current tax for the reporting date as well as for the deferred tax, result in a minimal amount, whereby the changes are presented in profit or loss as other operating expenses.

Notes to the consolidated financial statements (Amounts expressed in thousands of U.S. dollars, unless otherwise indicated)

3. Significant accounting policies (continued)

3.20 Taxes (continued)

The Bank performes an annual assessment of laws and regulations in its different jurisdictions together with its tax experts to determine uncertainty regarding income tax treatments, concluding that there is no uncertainty about tax treatments applied in each tax legislation.

3.21 Segment reporting

The Bank's segment reporting is based on the following business segments: Commercial, which incorporates the Bank's core business of financial intermediation and fee generating activities relating to the Bank's commercial portfolio; and Treasury, which is responsible for the Bank's funding and liquidity management, including its activities in investment securities, as well as management of the Bank's interest rate, liquidity, price, and currency risks.

3.22 Judgments, estimates and significant accounting assumptions

The preparation of the consolidated financial statements requires management to make estimates and use assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent liabilities at the reporting date and the reported amounts of revenues and expenses during the year.

Material estimates that are particularly susceptible to significant changes relate to the determination of the allowances for expected credit losses, impairment of securities, and the fair value of financial instruments. Actual results could differ from those estimates. Management believes these estimates are adequate.

A. Judgments

In the process of applying the Bank's accounting policies, management has made the following judgments, which have the most significant effect on the amounts recognized in the consolidated financial statements:

Determining the reserve for expected credit losses

When establishing ECL, judgment is applied by management in order to assess the amount and opportunity of the future cash flows with the purpose of evaluating whether credit risk has significantly increased since initial recognition, taking into account the characteristics of the financial asset and the former patterns pre-established for similar financial assets. The changes in risk of default occurring within the next 12 months can be a reasonable approach of the changes in the risk measure according to the lifetime of the instrument. The Bank uses the changes in risk of default occurring within the next 12 months to determine if the credit risk has significantly increased since initial recognition, unless the circumstances indicate an assessment during the lifetime of the instrument is necessary.

Significant increase in credit risk i.

For the financial assets in stage 1, ECL are measured as an allowance equal to 12-month ECL on stage 1 assets, or lifetime ECL assets on stage 2 or stage 3 assets. An asset moves to stage 2 when its credit risk has increased significantly since initial recognition. In assessing whether the credit risk of an asset has significantly increased the Bank takes into account reasonable and supportable forward-looking qualitative and quantitative information.

Establishing groups of assets with similar credit risk characteristics ii.

When ECL are measured on a collective basis, the financial instruments are grouped on the basis of shared risk characteristics.

The Bank monitors the appropriateness of the credit risk characteristics on an ongoing basis to assess whether they continue to be similar. This is required in order to ensure that when credit risk characteristics change there is appropriate re-segmentation of the assets. This may result in new portfolios being created or assets moving to an existing portfolio that better reflects the similar credit risk characteristics of that group of assets. Re-segmentation of portfolios and movement between portfolios is more common when there is a significant increase in credit risk (or when that significant increase reverses) and so assets move

3. Significant accounting policies (continued)

3.22 Judgments, estimates and significant accounting assumptions (continued)

from 12-month ECL to lifetime ECL, or vice versa, but it can also occur within portfolios that continue to be measured on the same basis of 12-month ECL or lifetime ECL but the amount of ECL changes because the credit risk of the portfolios differs.

Determining the fair value on financial instruments

Models and assumptions used

The Bank uses various models and assumptions in measuring fair value of financial assets as well as in estimating ECL. Judgment is applied in identifying the most appropriate model for each type of asset, as well as for determining the assumptions used in these models, including assumptions that relate to key drivers of credit risk.

Fair value measurement ii.

When the fair values of financial assets and financial liabilities recorded in the consolidated statement of financial position cannot be derived from active markets, they are determined using a variety of valuation techniques that include the use of mathematical models. The inputs to these models are derived from observable market data where possible, but if this is not available, judgment is required to establish fair values. The judgments include considerations of liquidity and model inputs such as volatility for longer-dated derivatives and discount rates, prepayment rates and default rate assumptions for asset-backed securities. The valuation of financial instruments is described in more detail in Note 7.

Business model assessment

Classification and measurement of financial assets depends on the results of the SPPI and the business model test. The Bank determines the business model at a level that reflects how groups of financial assets are managed together to achieve a particular business objective. This assessment includes judgment reflecting all relevant evidence including how the performance of the assets is evaluated and their performance is measured, and the risks that affect the performance of the assets and how they are managed. The Bank monitors financial assets measured at amortized cost or fair value through other comprehensive income that are derecognized prior to their maturity to understand the reason for their disposal and whether the reasons are consistent with the objective of the business for which the asset was held.

B. Estimates and assumptions

The key assumptions concerning the future and other key sources of estimating uncertainty at the reporting date, that have a significant risk of causing a material adjustment to the carrying amounts of assets and liabilities within the next financial year, are described below. The Bank based its assumptions and estimates on parameters available when the consolidated financial statements were prepared. Existing circumstances and assumptions about future developments, however, may change due to market changes or circumstances beyond the control of the Bank. Such changes are reflected in the assumptions when they occur.

Going concern

The Bank's management has made an assessment of its ability to continue as a going concern and is satisfied that it has the resources to continue in business for the foreseeable future. Therefore, the consolidated financial statements continue to be prepared on a going concern basis.

Impairment losses on financial instruments at amortized cost

The Bank individually assesses all credit impaired loans at amortized cost at each reporting date to assess whether an impairment loss. Management's judgment is required in the estimation of the amount and timing of future cash flows when determining the impairment loss. These estimates are based on assumptions about several factors and actual results that may vary, resulting in future changes to the allowance. Loans at amortized cost that do not give rise to credit im pairment individually are assessed in groups of assets with similar risk characteristics. This is to determine whether a provision should be made due to incurred loss events for which there is objective evidence, but which effects are not yet evident.

Notes to the consolidated financial statements (Amounts expressed in thousands of U.S. dollars, unless otherwise indicated)

3. Significant accounting policies (continued)

3.22 Judgments, estimates and significant accounting assumptions (continued)

The collective assessment takes into account data from the loan portfolio (such as levels of arrears, credit utilization, loan-tocollateral ratios, etc.), and judgments on the effect of concentrations of risks and economic data (including levels of unemployment, real estate price indices, country risk and the performance of various individual groups).

4. New accounting standards

4.1 New accounting policies and amendments not yet adopted

In September 2019, the International Accounting Standards Board (IASB) finalized Phase 1 of the IBOR Reform and issued the document Interest Rate Benchmark Reform ("the Reform"), which contains amendments to IFRS 9 and IFRS 7. These amendments are effective for annual periods beginning on or after 1 January 2020.

In August 2020, the IASB published the second phase of the project amendments to the Reform; this document contains exemptions and clarifications for the applicable financial instruments.

Phase 2 of the Reference Interest Rate Reform Project

This document contains:

- Clarifications on changes in the basis used for determining contractual cash flows
- Practical exemptions applicable to the existing criteria for re-estimating financial assets and liabilities at variable interest rates to account for modifications resulting from the Reform.
- Practical exemptions allowing changes in the initial documentation of hedging relationships
- -Waivers for hedge groups of hedged items and interest rate risk portfolios when the items in the designated group are subject to the contractual amendments resulting from the Reform
- Adds additional requirements when there are changes in the basis used to determine the contractual cash flows of the financial asset or liability that has given rise to the designation of a hedge
- Provides temporary waiver in the designation of risk components
- New disclosure requirements are included in the financial statements

The amendments issued in the second phase of the project are mandatory for annual periods beginning on or after 1 January 2021, and early adoption is permitted.

As of 31 December 2020, the Bank has not made the adoption of the reforms contained in phases 1 and 2 of the project amendments.

Managing interest rate benchmark reform and any risks arising due to reform

Fundamental reform of significant interest rate benchmarks is being undertaken globally, including the replacement of interbank offered rates (IBORs) with alternative nearly risk-free rates. Due to the nature of its business, the Bank's portfolio is mainly constituted of short-term fixed rate assets and liabilities. However, the Bank has exposures to IBORs (USD LIBOR only) on its financial instruments that will be replaced or reformed as part of these market-wide initiatives. There is uncertainty over the timing and the methods of transition. The Bank anticipates that IBOR Reform will impact its risk management and hedge accounting.

The Bank's LIBOR Transition Steering Committee (LTSC) monitors and manages the transition to alternative rates. The Committee evaluates the extent to which contracts reference IBOR cash flows, whether such contracts need to be amended as a result of IBOR Reform and how to manage communication about IBOR reform with counterparties. The Committee reports to the Board of Directors and collaborates with other business functions as needed. It provides periodic reports to management on interest rate risk and risks arising from IBOR Reform.

Notes to the consolidated financial statements (Amounts expressed in thousands of U.S. dollars, unless otherwise indicated)

4. New accounting standards (continued)

4.1 New accounting policies and amendments not yet adopted (continued)

Although USD LIBOR was planned to be discontinued by the end of 2021, consultations and possible regulatory changes are in progress. This may mean that certain USD LIBOR tenors may continue to be published until June 30, 2023.

At the end of 2020, the Bank commenced amending existing loans and advances to corporate customer, including loan commitments. These amendments incorporate a fallback provision stating that the existing USD LIBOR benchmark rate will be replaced by SOFR (Secured Overnight Financing Rate) when USD LIBOR ceases to exist. The Bank plans to finish the process of amending contractual terms by the end of 2021.

The main risks to which the Bank is exposed as a result of IBOR reform are operational. Such operational risks include the renegotiation of loan contracts through bilateral negotiation with customers, updating of contractual terms, updating of systems that use USD LIBOR curves and revision of operational controls related to the Reform. Financial risk is predominantly limited to interest rate risk.

Non-derivative financial instruments and loan commitments

Ouantitative Information

Disaggregated information by financial instruments that have yet to transition to an alternative benchmark rate as at the end of the reporting period December 31, 2020 is the following. The information presented is the remaining exposure as at each reporting period.

	USD LIBOR as of December 31, 2021 (Notional in US\$ <i>thousands</i>)	USD LIBOR as of December 31, 2022 (Notional in US\$ <i>thousands</i>)	USD LIBOR as of June 30, 2023 (Notional in US\$ <i>thousands)</i>
Non-derivative financial assets Loans	1,034,252	473,643	416,833
Non-derivative financial liabilities Borrowings	222,500	62,500	12,500
Loan commitments	63,333	60,000	10,000

The Bank has USD LIBOR exposures on floating-rate loans and advances to customers and loan commitments.

Banco Latinoamericano de Comercio Exterior, S. A. and Subsidiaries

Notes to the consolidated financial statements (Amounts expressed in thousands of U.S. dollars, unless otherwise indicated)

- 4. New accounting standards (continued)
 - 4.1 New accounting policies and amendments not yet adopted (continued)

Derivatives held for risk management and hedge accounting

The Bank's derivative instruments are governed by ISDA's 2006 definitions. ISDA has reviewed its definitions in light of IBOR Reform and issued an IBOR fallbacks supplement on October 23, 2020. This sets out how the amendments to new alternative benchmark rates (e.g., SOFR) in the 2006 ISDA definitions will be accomplished. The effect of the supplement is to create fallback provisions in derivatives that describe what floating rates will apply on the permanent discontinuation of certain key IBORs or in ISDA declaring a non-representative determination of an IBOR.

The Bank plans to adhere to the protocol to implement the fallbacks to derivative contracts that were entered into before the effective date of the supplement. If derivative counterparties also adhere to the protocol, then new fallbacks will be automatically implemented in existing derivative contracts on the later of when the supplement becomes effective or both counterparties adhere to the protocol. From that date, all new derivatives that reference the ISDA definitions will also include the fallbacks. Consequently, the Bank is monitoring whether its counterparties will also adhere to the protocol and, if there are counterparties that will not, then the Bank plans to negotiate with them bilaterally about inclusion of new fallback clauses.

As of December 31, 2020, the Bank has not amended its derivatives instruments with its counterparties.

Hedge Accounting

The Bank has evaluated the extent to which its fair value and cash flow hedging relationships are subject to uncertainty driven by IBOR Reform as at the reporting date. The Bank's hedged items and hedging instruments continue to be indexed to USD LIBOR benchmark rates. These USD LIBOR benchmark rates are quoted each day and IBOR cash flows are exchanged with its counterparties as usual.

The Bank has very limited cash flow hedging relationships with USD LIBOR risks extending beyond the anticipated revised cessation date for USD LIBOR. Exposure to USD LIBOR designated in a cash flow hedging relationship at 31 December 2020 is a nominal amount of \$20 million attributable to the interest rate swap hedging USD LIBOR cash flows on the Bank's USD liabilities maturing in 2023.

The Bank expects that SOFR will replace USD LIBOR, but there is uncertainty over the timing and amount of the replacement rate cash flows. Such uncertainty may impact the hedging relationship – e.g., its effectiveness assessment and highly probable assessment. For these assessments, the Bank assumes that the hedged benchmark interest rate, the cash flows of the hedged item and/or the hedging instrument will not be altered as a result of IBOR Reform.

If a hedging relationship impacted by uncertainty about IBOR Reform has not been highly effective throughout the financial reporting period, then the Bank will evaluate whether the hedge is expected to be highly effective prospectively and whether the effectiveness of the hedging relationship can be reliably measured. The hedging relationship will not be discontinued as long as it meets all criteria for hedge accounting, with the exception of the requirement that the hedge was actually highly effective.

Hedging relationships impacted by uncertainty about IBOR Reform may experience ineffectiveness attributable to market participants' expectations of when the shift from the existing IBOR benchmark rate to an alternative benchmark interest rate will occur. This transition may occur at different times for the hedged item and the hedging instrument, which may lead to hedge ineffectiveness. The Bank has measured its hedging instruments indexed to IBORs using available quoted market rates for IBOR-based instruments of the same tenor and similar maturity and has measured the cumulative change in the present value of hedged cash flows attributable to changes in IBOR on a similar basis.

Notes to the consolidated financial statements (Amounts expressed in thousands of U.S. dollars, unless otherwise indicated)

4. New accounting standards (continued)

4.1 New accounting policies and amendments not yet adopted (continued)

Hedge Accounting (continued)

When the uncertainty arising from IBOR reform no longer exists, the Bank will cease to apply the assumptions that the hedged benchmark interest rate, the cash flows of the hedged item and/or hedging instrument will not be altered as a result of IBOR Reform. At that time, the Bank will also remeasure the cumulative changes in the hedged cash flows and the hedging instrument based on new alternative benchmark rates - i.e., SOFR. For the purpose of remeasuring the cumulative changes in the hedged cash flows, the Bank will amend the terms of the hypothetical derivative to reflect the changes required by IBOR Reform in the hedged item.

Ouantitative Information

Disaggregated information by derivative financial instruments that have yet to transition to an alternative benchmark rate as at the end of the reporting period December 31, 2020 is the following. The information presented is the remaining notional amount as at each reporting period.

	USD LIBOR	USD LIBOR	USD LIBOR

Leasing Reform IFRS 16

In May 2020, the IASB published the document "Rental Lease concessions related to COVID-19", which contains amendments to IFRS 16 Leases effective as of June 1, 2020, in order to provide relief to the lessee with respect to the rental concessions granted as a result of the events of COVID-19, where in the existing event the lessee must re-measure the responsibility of the lease using a revised discount rate.

At the reporting date, the Bank has not modified nor received concessions in the lease agreements entered into with third parties.

5. Financial risk

This note presents information about the Bank's exposure to financial risks and the Bank's management of capital.

- A. Credit risk
 - Credit quality analysis i.

The following tables set out information about the credit quality of financial assets measured at amortized cost, and securities at FVOCI. Unless specifically indicated, for financial assets the amounts in the table represent the outstanding balances. For loan commitments and financial guarantee contracts, the amounts in the table represent the amounts committed or guaranteed, respectively. Explanation of the terms 'Stage 1', 'Stage 2' and 'Stage 3' is included in Note 3.4 (J).

The Bank's Management has not made any adjustment to the methodology and key inputs used to determine the PD and LGD parameters produced by the model, after assessing the impact in the economic sectors caused by the pandemic COVID-19 (as set out in Note 6).

	74 471	625	(2,575)
Foreign exchange forwards	74,471	023	(2,575)

ii. Collateral and other credit enhancements

The amount and type of collateral required depends on an assessment of the credit risk of the counterparty. Guidelines are in place covering the acceptability and valuation of each type of collateral.

Derivatives and repurchase agreements

In the ordinary course of business, the Bank enters into derivative financial instrument transactions and securities sold under repurchase agreements under industry standard agreements. Depending on the collateral requirements stated in the contracts, the Bank and counterparties can receive or deliver collateral based on the fair value of the financial instruments transacted between parties. Collateral typically consists of pledged cash deposits and securities. The master netting agreements include clauses that, in the event of default, provide for close-out netting, which allows all positions with the defaulting counterparty to be terminated and net settled with a single payment amount.

The International Swaps and Derivatives Association master agreement ("ISDA") and similar master netting arrangements do not meet the criteria for offsetting in the consolidated statement of financial position. This is because they create for the parties to the agreement a right of set-off of recognized amounts that is enforceable only following an event of default, insolvency or bankruptcy of the Bank or the counterparties or following other predetermined events.

(Amounts expressed in thousands of U.S. dollars, unless otherwise indicated)

5. Financial risk (continued)

A. Credit risk (continued)

Such arrangements provide for single net settlement of all financial instruments covered only by the agreements in the event of default on any one contract. Master netting arrangements do not normally result in an offset of balance-sheet assets and liabilities unless certain conditions for offsetting are met.

Although master netting arrangements may significantly reduce credit risk, it should be noted that:

- Credit risk is eliminated only to the extent that amounts due to the same counterparty will be settled after the assets are realized.
- The extent to which overall credit risk is reduced may change substantially within a short period because the exposure is affected by each transaction subject to the arrangement.

Loans

The main types of collateral obtained are as follows:

- For commercial lending, liens on real estate property, inventory and trade receivables.

The Bank also obtains guarantees from parent companies for loans to their subsidiaries. Management monitors the market value of collateral and will request additional collateral in accordance with the underlying agreement. It is the Bank's policy to dispose of repossessed property in an orderly fashion. The proceeds are used to reduce or repay the outstanding claim. In general, the Bank does not occupy repossessed property for business use.

The Bank holds guarantees and other financial credit enhancements against certain exposures in the loan portfolio. As of December 31, 2020, and 2019, the coverage ratio to the carrying amount of the loan portfolio was 12%...

iii. Implementation of forward-looking information

The Bank incorporates information of the economic environments on a forward-looking view, when assessing whether the credit risk of a financial instrument has significantly increased since initial recognition through customer and country rating models which include projections of the inputs under analysis.

Supplementary, for the expected credit loss measurement, the results of the "alert model" can be considered, which are analyzed through a severity indicator to total risk resulting from the estimates and assumptions of several macroeconomics factors. These estimates and assumptions are supported by a central scenario. Other scenarios represent upside and downside results. The implementation and interpretation of the outcomes of the alert are based on the expert judgment of management, based on suggestions of areas such as Credit Risk, Economic Studies and Loan Recovery of the Bank.

The external information could include economic data and projections published by governmental committees, monetary agencies (For example, Federal Reserve Bank and from countries where the Bank operates), supranational organizations (International Monetary Fund, The World Bank, World Trade Organization), private sector, academic projections, credit rating agencies, among other.

Banco Latinoamericano de Comercio Exterior, S. A. and Subsidiaries Notes to the consolidated financial statements

(Amounts expressed in thousands of U.S. dollars, unless otherwise indicated)

5. Financial risk (continued)

A. Credit risk (continued)

Main macroeconomies variables of the country rating model with forward-looking scenarios are:

Variables	
GDP Growth (Var. %)	% Var
ComEx Growth (Var. %)	% Var

The model uses, as main inputs, the following macroeconomic variables: the percentage variation of the gross domestic product of Latin America and the percentage of the foreign trade index growth. The main movements and changes in the variables are analyzed, in general and in particular for each country in the region. This historical and projected information over a period of five years allows Management a complementary means to estimate the macroeconomic effects in the Bank's portfolio.

The table below lists the macroeconomic assumptions by country used in the central, upside and downside scenarios over the five-year forecasted average available for each reporting period.

Loan commitments, financial guarantee contracts and customers' liabilities under acceptances

The allowance for expected credit losses on loan commitments and financial guarantee contracts reflects the Bank's management estimate expected credit losses of customers' liabilities under acceptances and items such as: confirmed letters of credit, standby letters of credit, guarantees, and credit commitments.

v. Credit-impaired financial assets

Credit-impaired loans and advances are graded 8 to 10 in the Bank's internal credit risk grading system.

The following table sets out a reconciliation of changes in the net carrying amount of allowance for credit losses for creditimpaired loans

	December 31, 2020	December 31, 2019	
Credit-impaired loans and advances at			
beginning of year	54,573	49,439	
Classified as credit-impaired during the year	2,100	-	
Change in allowance for expected credit losses	(744)	7,164	
Recoveries of amounts previously written off	139	52	
Interest income	626	323	
Write-offs	(52,106)	(2,405)	
Credit-impaired loans and advances at end of year	4,588	54,573	

During the year ended December 31, 2020, the sale of the outstanding credit-impaired loan in Stage 3, classified at amortized cost, was made for \$11.6 million. This sale resulted in a write off against the allowance for credit losses of \$52.1 million.

Derivative financial instruments used for hedging	(9,211)	-	(9,211)	-	7,786	(1,425)
Total	(19,874)		(19,874)	11,998	7,804	(72)

Banco Latinoamericano de Comercio Exterior, S. A. and Subsidiaries

Notes to the consolidated financial statements (Amounts expressed in thousands of U.S. dollars, unless otherwise indicated)

5. Financial risk (continued)

B. Liquidity risk

i. Exposure to liquidity risk

The key measure used by the Bank for managing liquidity risk is the ratio of net liquid assets to deposits from customers and short-term funding. For this purpose, 'net liquid assets' includes cash and cash equivalents which consist of deposits from banks and customers, as well as corporate debt securities rated A- or above.

The following table details the Bank's liquidity ratios, described in the previous paragraph, for the year ended December 31, 2020 and 2019, respectively:

At the end of the year
Year average
Maximum of the year
Minimun of the year

The following table includes the Bank's liquid assets by geographical location:

		December	31, 2019			
	Gross	Gross amounts offset in the	Net amount of liabilities presented	Gross amounts the consolidated financial p	Not	
Description	amounts of liabilities	consolidated statement of financial position	in the consolidated statement of financial position	Financial instruments	Cash collateral pledged	Net Amount
Securities sold under repurchase agreements	(40,530)		(40,530)	41,937	320	1,727
Derivative financial instruments used for hedging						
	(14,675)		(14,675)		14,632	(43)
Total	(55,205)	-	(55,205)	41,937	14,952	1,684

	1	December 31, 2020		December 31, 2019
(in millions of USD dollars)	Cash and due from banks	Securities FVOCI	Total	Cash and due from banks
United State of America	740	90	830	1,132
Other O.E.C.D countries	100	-	100	4
Latin America	6	-	6	4
Other countries	-	-	-	20
Multinational	-	112	112	-
Total	846	202	1,048	1,160

The following table includes the Bank's demand deposits from customers and its ratio to total deposits from customers:

(in millions of USD dollars) Demand liabilities and "overnight" % Demand liabilities and "overnight" to total deposits

December 31,
2019
52.48%
37.82%
53.38%
23.23%

December 31, 2020	December 31, 2019
171	86
5.44%	2.97%

(Amounts expressed in thousands of U.S. dollars, unless otherwise indicated)

5. Financial risk (continued)

B. Liquidity risk (continued)

The liquidity requirements resulting from the Bank's demand deposits from customers is satisfied by the Bank's liquid assets as follows:

	December 31,	December 31,
(in millions of USD dollars)	2020	2019
Total liquid assets	1,048	1,160
% Total assets to total liabilities	33.40%	40.15%
% Total liquid assets in the U.S. Federal		
Reserve	65.68%	97.37%

Even though the average term of the Bank's assets exceeds the average term of its liabilities, the associated liquidity risk is diminished by the short-term nature of a significant portion of the loan portfolio, since the Bank is primarily engaged in financing foreign trade.

The following table includes the carrying amount for the Bank's loans and securities short-term portfolio with maturity within one year based on their original contractual term together with its average remaining term:

	December 31,	December 31,
(in millions of USD dollars)	2020	2019
Loan portfolio at amortized cost and investment		
portfolio less than/equal to 1 year according to its		
original terms	3,114	3,485
Average term (days)	195	189

The following table includes the carrying amount for the Bank's loans and securities medium term portfolio with maturity over one year based on their original contractual terms together with their average remaining term:

	December 31,	December 31,
(in millions of USD dollars)	2020	2019
Loan portfolio at amortized cost and investment		
portfolio greater than/equal to 1 year according to its		
original terms	2,193	2,497
Average term (days)	1,382	1,185

Banco Latinoamericano de Comercio Exterior, S. A. and Subsidiaries

40,531	38 ,045
	5,823,333
58,983	

(Amounts expressed in thousands of U.S. dollars, unless otherwise indicated)

5. Financial risk (continued)

C. Market risk

The Bank manages market risk by considering the consolidated financial situation of the Bank. For the definition of market risk and information on how the Bank manages the market risks of trading and non-trading portfolios, see note 6.

i. Interest rate risk

The following is a summary of the Bank's interest rate gap position for the financial assets and liabilities based on their next repricing date:

	December 31, 2020						
- Description	Up to 3 months	3 to 6 months	6 months to 1 year	1 to 5 years	More than 5 years	Non interest rate risk	Total
Assets							
Demand deposits and time deposits	859,481	-	-	-	-	4,331	863,812
Securities and other financial assets	9,554	9,139	55,960	320,769	-	-	395,422
Loans	3,468,477	895,794	434,813	117,262	-	-	4,916,346
Total assets	4,337,512	904,933	490,773	438,031	-	4,331	6,175,580
Liabilities							
Demand deposits and time deposits	(2,675,867)	(166,317)	(290,000)	(6,500)	-	(216)	(3,138,900)
Securities sold under repurchase agreements	-	(5,728)	(4,935)	-	-	-	(10,663)
Borrowings and debt	(1,103,703)	(45,859)	(16,511)	(794,522)	(24,475)	-	(1,985,070)
Total liabilities	(3,779,570)	(217,904)	(311,446)	(801,022)	(24,475)	(216)	(5,134,633)
Net effect of derivative financial instruments held							
for interest risk management	(3)	(373)	58	15,982	839	-	16,503
Total interest rate sensitivity	557,939	686,656	179,385	(347,009)	(23,636)	4,115	1,057,450

	December 31, 2019						
Description	Up to 3 months	3 to 6 months	6 months to 1 year	1 to 5 years	More than 5 years	Non interest rate risk	Total
Assets							
Demand deposits and time deposits	1,170,092	-	-	-	-	-	1,170,092
Securities and other financial assets	14,935	6,351	5,055	53,300	-	-	79,641
Loans	4,031,432	1,096,355	548,028	208,443	8,739	-	5,892,997
Total assets	5,216,459	1,102,706	553,083	261,743	8,739		7,142,730
Liabilities							
Demand deposits and time deposits	(2,570,324)	(197,300)	(120,419)	-	-	(293)	(2,888,336)
Securities sold under repurchase agreements	(40,530)	-	-	-	-	-	(40,530)
Borrowings and debt	(2,534,382)	(401,432)	(25,261)	(157,321)		(19,914)	(3,138,310)
Total liabilities	(5,145,236)	(598,732)	(145,680)	(157,321)	-	(20,207)	(6,067,176)
Net effect of derivative financial instruments held							
for interest risk management	(2,425)	(150)	(1,711)	(1,482)			(5,768)
Total interest rate sensitivity	68,798	503,824	405,692	102,940	8,739	(20,207)	1,069,786

Management of interest rate risk is complemented by monitoring the sensitivity of the Bank's financial assets and liabilities to various standard interest rate scenarios. Standard scenarios that are considered on a monthly basis include a 50bps, 100bps and 200bps, parallel fall or rise in all yield curves which are assessed accordingly to market conditions.

Banco Latinoamericano de Comercio Exterior, S. A. and Subsidiaries

Notes to the consolidated financial statements (Amounts expressed in thousands of U.S. dollars, unless otherwise indicated)

5. Financial risk (continued)

C. Market risk (continued)

ii. Interest rate risk (continued)

Following is an analysis of the Bank's sensitivity to the most likely increase or decrease in market interest rates at the reporting date, assuming no asymmetrical movements in yield curves and a constant financial position:

	Change in interest rate	Effect on profit or loss	Effect on equity
December 31, 2020	+50 bps	1,182	16,618
	-50 bps	(5,161)	107
December 31, 2019	+50 bps	3,064	7,461
	-50 bps	(3,064)	(7,461)

Interest rate movements affect reported equity in the following ways:

- loss:
- hedge relationships.

This sensitivity provides a consideration of changes in interest rates, considering last period interest rate volatility.

iii. Foreign exchange risk

The following table presents the maximum exposure amount in foreign currency of the Bank's carrying amount of total assets and liabilities, excluding derivative financial assets and liabilities, based on their fair value.

	December 31, 2020						
	Brazilian Real	European Euro	Japanese Yen	Colombian Peso	Mexican Peso	Other Currencies	Total

Banco Latinoamericano de Comercio Exterior, S. A. and Subsidiaries

Notes to the consolidated financial statements (Amounts expressed in thousands of U.S. dollars, unless otherwise indicated)

6. Financial risk management

The risk is inherent to the Bank's activities. Risks are classified into two categories: financial and non-financial risks. Financial risks are those associated within the Bank's business model, with impact in the Bank's consolidated statement of financial position and profit or loss, as follows: country risk, credit risk, market risk and liquidity risk. Non-financial risks are those related to the Bank's operating model and the regulatory environment that may affect the integrity of the information, the Bank's reputation and also its profit or loss accounts, as follows: operational, technological, cyber security, compliance (know your customer, money laundering, terrorism financing), environmental, fraud risks, among others.

Lead by the Head of Integrated Risk Management, an ongoing process of identification, measurement, monitoring, control, mitigation and reporting to all operating areas within the Bank is carried out continuously, considering the different types of risk to which the Bank is exposed according to the size and complexity of its operations, products and services.

The Bank has in place policies, standards and procedures, structures, and manuals associated to the integral risk management, designed to identify potential events that may affect it, all of which are consistent with the risk profile of the business, considering the complexity and the volume of its operations.

The Board of Directors is responsible for establishing the Bank's acceptable risk profile, for which it has the knowledge and understanding of the risks to which the Bank is exposed to. The Board of Directors designate the members of the Risk Policy and Assessment Committee (CPER, for its acronym in Spanish), which is responsible for overseeing the overall risk process within the Bank.

CPER oversees the assessment and recommendation for approval to the Board of Directors of all the policies relating to a reasonable Integrated Risk Management. Furthermore, the Committee also reviews and assesses the exposure, within the risk levels stated in its policies, by which the Bank is willing to assume the various risks it faces through the business management.

The Head of Integrated Risk Management directly reports to the CEO and the CPER, and has as a main duty to ensure the comprehensive risk management of the Bank's operating model and IT platform, as well as the financial and credit related risks, being responsible for implementing and maintaining risk-related procedures in place to ensure that an independent control process is kept, monitoring the compliance of the risk principles, policies and limits at all levels throughout the Bank. The Head of Integrated Risk Management works closely with CPER to ensure that procedures are consistent with the Integrated Risk Management Governance Framework. Risk Management Committees:

- Operational and Information Security Risk Committee

- Country Risk Committee
- Management and Monitoring Committee
- Asset and Liability Committee (ALCO)

A. Credit risk

As part of the embedded risk, the Bank will incur in losses in and/or its assets will be impaired as a result of the failure of its borrowers to comply in a timely manner or to meet the terms of credit agreements.

The Bank's customer base consists primarily of corporations, large companies, local and regional financial institutions, as well as state-owned enterprises. The Bank focuses its risk assessment on an in-depth analysis of the entity or economic group that involves: the nature of the business, the countries where it operates, types of products offered, duration of the relationship, track record and reputation, among others.

- Credit Committee (Management Credit Committee / Board of Directors Delegate Credit Committee / CPER)

6. Financial risk management (continued)

A. Credit risk (continued)

Credit risk management comprises two main stages: origination and monitoring. The credit origination process involves the activities of identifying and analyzing the customer's creditworthiness and approving the terms and conditions for credit extensions. The monitoring process consists of annual credit reviews of existing exposures, "ad hoc" reviews on a case-by-case basis when conditions so require, and portfolio reviews by the Bank's credit committees. The objective is to maximize the riskadjusted rate of return by keeping credit risk exposures within acceptable parameters. This process involves the Risk and Business Units under the supervision of the Board of Directors, through the Risk Policy and Assessment Committee (CPER).

The Bank has developed internally a loss model to determine the required level of expected credit losses associated with potential losses in financial instruments, based on IFRS 9 - Financial Instruments.

Individually assessed reserves

The Bank individually assesses the appropriate reserves for certain significant financial assets, by considering interest payment delays, credit rating downgrading or any breach of the original contractual terms. Factors considered when determining a reserve include the sustainability of the counterparty's business plan, its ability to improve performance when facing a difficult financial situation, projected payments and expected results in the event of bankruptcy, the availability of other financial support, the realizable value of collateral, and the timing of expected cash flows. Impairment loss is assessed at each reporting date, unless unforeseen circumstances require special attention.

Collectively assessed reserves

Reserves are separately assessed at each reporting date for each portfolio. The collective assessment is made for groups of assets with similar risk characteristics, to determine whether it is appropriate to provide for, due to incurred loss events for which there is objective evidence, but the effects of which are not yet evident in individual loan assessments. The collective assessment considers either portfolio information (e.g. historical losses in the portfolio, delinquency levels, credit utilization, loan-tocollateral ratios and expected collections and recoveries after impairment) and economic data (such as current economic conditions, unemployment, local or industry-specific situations).

The Bank generally supports its assessment on historical experience and forward-looking information. However, when significant market, regional and/or global events occur, the Bank includes these macroeconomic factors in its assessments. Depending on the characteristics of the individual or collective assessment, these factors include: unemployment rates, current levels of impaired debt, changes in law, changes in regulation, bankruptcy trends and other consumer data. The Bank may use the above factors, as appropriate, to adjust for impairment.

The time elapsed since a loss is incurred and a specific individual reserve requirement is identified should be taken into consideration for the assessment. The impairment reserve is reviewed by credit management to ensure alignment with the Bank's general policy.

Financial guarantees and letters of credit are assessed in a similar manner to amortized cost loans.

A supplemental qualitative review may result in adjustments to the level of provisions, based on prospective reviews of potential risk scenarios for businesses or loans not yet captured in the Bank's historical information.

The Bank has developed an internal customer, counterparty and country rating model, which allows for proactive risk management in terms of exposure limits, transaction typology and time limits, among others.

Banco Latinoamericano de Comercio Exterior, S. A. and Subsidiaries

Notes to the consolidated financial statements (Amounts expressed in thousands of U.S. dollars, unless otherwise indicated)

6. Financial risk management (continued)

A. Credit risk (continued)

Derivative financial instruments

Credit risk arising from derivative financial instruments is, at any time, limited to those with positive fair values, as recognized in the consolidated statement of financial position at fair value. With derivatives that are settled gross, the Bank is also exposed to settlement risk, which is the risk that the Bank will honor its obligation, but the counterparty will be unable to deliver the value of the consideration.

Credit Commitments.

The Bank makes available to its customers guarantees that may require the Bank to make payments on behalf of these customers and to take on commitments to issue lines of credit to ensure their liquidity needs. Letters of credit and guarantees (including standby letters of credit) commit the Bank to make payments on behalf of customers for a specific event, usually related to the import or export of goods. Such commitments expose the Bank to risks similar to those for loans which are mitigated by the same controls established in processes and policies.

B. Liquidity risk

Liquidity risk is the possibility of an economic loss to the Bank due to the difficulty in liquidating assets or obtaining financial resources on normal terms.

The Bank conducts daily reviews of the Liquidity Coverage Ratio (LCR). The LCR methodology follows local standards and guidelines recommended by the Basel Committee. The Bank also monitors the Net Stable Funding Rate (NSFR), to maintain an adequate funding structure over the long term.

Liquidity is controlled through the periodic review of:

- The maturity schedule to identify maturity "gaps" in the various time frames.
- liquidity.

The Bank has a Liquidity Contingency Plan in place, which was designed to monitor a series of indicators that could trigger a liquidity event, with potential impact on the Bank's operations and establishes an action plan so that the Bank's liquidity is always assured.

C. Market risk

Market risk is the risk that the value of the Bank's assets and liabilities will decline due to changes in market conditions that may adversely affect its income. The risk is inherent in the financial instruments associated with the Bank's operations and activities, including: loans, investments and securities, liabilities and debt, derivatives, etc. The main risks include: interest rate risk and foreign exchange risk, which can affect asset prices and result in losses for the Bank.

With respect to interest rate risk management, the Bank's policy requires Management to assess the asset and liability positions in order to reduce potential adverse impacts on net interest income due to market interest rates fluctuations.

The Bank manages interest rate risk by closely monitoring the appreciation and decline in value of the assets and liabilities through hedging to reduce potential negative impacts on earnings and capital.

Management conducts periodic sensitivity analyses simulating market changes in interest rates to determine potential impacts on net interest income (both upward and downward). In addition, the Bank monitors the DV01 limit, for which a parallel 1-base point shock is applied to the interest rate curve and assesses if there is any impact on capital.

Deposit concentration report to identify possible increases in amounts and maturities that may affect the Bank's

6. Financial risk management (continued)

C. Market risk (continued)

Foreign exchange risk is the risk of change in the market value of a financial instrument due to fluctuations in the exchange rate of a given currency. The Bank operates primarily in U.S. dollars, so exposure to this type of risk is minimized. For transactions in currencies other than the US dollar, the Bank manages the exchange rate risk by arranging derivative instruments for hedging purposes, or by establishing natural hedges matching assets and liabilities expressed in the same currency. For liquidity positions, the Bank has established thresholds in order to limit the maximum level of exposure.

D. Operational risk

Operational risk is the possibility of incurring losses due to deficiencies, failures or inadequacies in human resources, processes, technology, infrastructure, management information, models used, or the occurrence of external events. If this occurs, it can damage the Bank's reputation and result in regulatory sanctions, which can lead to financial losses. The Bank, like any other financial institution, is exposed to operational risks.

Bladex's main objective with Operational Risk Management is to reduce losses generated from operational risk and maintain an adequate administration thereof through the use of established management tools such as: risk profile, risk mapping, global and specific limits, operational risk indicators, and using as well the analysis of what is recorded in the Events and Incidents Database in order to monitor action plans of the actual or potential risks.

The Bank emphasizes the awareness of its employees, promoting a Risk Management culture that has continuity over time and that allows them to understand and assimilate the importance of this concept from each of the processes that are executed within their areas. This is done throughout the training of all employees on an annual basis to raise their awareness in general terms of operational risks and to include updates on the standard or regulatory laws as required.

E. Fraud risk

Fraud is any intentional act or omission designed to deceive others, resulting in a loss for the victim and/or a gain for the perpetrator.

Identification of fraud risk considers both internal and external factors, and their impact on the achievement of the Bank's objectives. Internal fraud is related to losses arising from any type of action, involving Bank employees, aimed at defrauding, misappropriating property or violating regulations, laws or internal policies. External fraud is related to losses arising from any type of action by a third party aimed at defrauding, misappropriating property or infringing the law.

To manage this risk, the Bank has a general fraud risk management program in place, which includes: establishing fraud risk governance policies, evaluating fraud risk, designing and developing control activities to prevent and detect fraud, and investigating fraud, including monitoring and evaluating the fraud risk management program.

F. Cybersecurity

Cybersecurity or information technology security refers to the procedures designed, and measures implemented to protect technological appliances, networks, programs and data against cyber-attacks, in other words, unauthorized access or attacks aimed at operating, or misusing, the Bank's technology platform to access the financial system. The Bank has approved policies and implemented procedures defining roles and responsibilities for managing information security as part of the IT security and technology risk management framework. These policies and procedures apply throughout the Bank and cover all relationships between the workforce, vendors and suppliers, as well as any other individual who, on a permanent or temporary basis with the Bank, has some form of access to data, resource management and IT systems.

Banco Latinoamericano de Comercio Exterior, S. A. and Subsidiaries

Notes to the consolidated financial statements (Amounts expressed in thousands of U.S. dollars, unless otherwise indicated)

6. Financial risk management (continued)

F. Cybersecurity (continued)

The Bank's Information Security Officer is responsible for ensuring compliance with policies and procedures by anyone with access to the Bank's systems.

The Bank's cybersecurity program has been developed with a holistic approach, allowing us to encompass both technical and strategic measures in a single framework.

Impacts and actions implemented in the context of COVID-19

The COVID-19 pandemic and the measures implemented globally to prevent its spread could negatively impact the Bank's business in a number of ways. These impacts may include, among others, reduced business volumes, restricted access to funding sources, insufficient liquidity, delayed or defaulted payments from the Bank's customers or from the Bank's financial counterparties, increased levels of indebtedness or the unavailability of sufficient financing for the Bank's borrowers, and other factors which are beyond the Bank's control. In this context, and in order to mitigate these risks, the Bank has implemented a series of measures and actions described below.

i. Liquidity risk

Following the COVID-19 pandemic and its potential impact on the availability of resources, the Bank activated its Liquidity Contingency Plan, based on internally designed market triggers, in order to ensure a robust position given the situation caused by the pandemic. This led the Bank to adjust the scenario of its internal liquidity coverage ratio "LCR" from a regular level of 1 to a level of 3, which implies more restrictive assumptions for inflows and outflows of cash, with a downward adjustment of the percentages of funding sources renewals and of loan portfolio collections. Other additional elements included in the Liquidity Contingency Plan are, among others, the collection of all loan maturities and the case-by-case approval of all new credit disbursements by the Credit Committee, establishing at least biweekly meetings.

Following the execution of the previously described Liquidity Contingency Plan, the Bank achieved a significant increase in its cash position in a short period of time, managing to continuously maintain a robust level of liquidity, exceeding regulatory requirements.

The Bank's capacity to maintain these strong liquidity levels, even in the current context, is attributable to historically diversified and stable funding sources, including deposits from central banks in Latin America and the Caribbean, who are also the Bank's Class A shareholders. In addition, the Bank has maintained a fluid access to a significant base of correspondent banks and investors from debt capital markets across the globe, which have maintained and even increased their availability of funding to the Bank in the last few months. Furthermore, the Bank has been able to collect on the majority of scheduled maturities of its loan portfolio and has then disbursed new transactions on a selective basis, prioritizing prudent risk management over loan growth, with a focus on adequate levels of risk / return.

The Bank intends to maintain this additional level of liquidity as long as the current environment of volatility and uncertainty remains, therefore it will continue to give preference to maintaining a resilient and robust liquidity position over the growth of its balance sheet and / or its profitability.

ii. Credit risk

The Bank determines the appropriate level of allowances for expected credit losses based on a forward-looking process that estimates the probable loss inherent in its Credit Portfolio, which is the result of a statistical analysis supported by the Bank's historical portfolio performance, external sources, and the judgment of the Bank's management. This level of allowance reflects assumptions and estimates made in the context of changing political and economic conditions in the region, including but not limited to the impact of recent ongoing turmoil related to COVID-19.
Notes to the consolidated financial statements (Amounts expressed in thousands of U.S. dollars, unless otherwise indicated)

6. Financial risk management (continued)

ii. Credit risk (continued)

The Bank has a Business Model mainly focused on financial institutions and large corporations, a portion of which represents "quasi-sovereign" risks, with an average short-term duration, allowing an agile adjustment of exposure in adverse scenarios.

Actions implemented due to the COVID-19 pandemic

In late March 2020, due to the context, Bladex elaborated a heat map including each country and industry in which it maintains exposure. This allowed the Bank to identify customers with higher levels of risk depending on the country, industry and financial position.

Four main variables were used to assign the level of customer risk:

Financial Institutions

Corporations

- a. COVID-19 business impact
- b. Portfolio quality and coverage levels
- b. Solvency level
- ii. Liquidity position

- a. COVID-19 business impact
- a. Foreign currency exchange risk
- i. Commodity risk
- d. Liquidity position

The Bank's Management holds conference and video calls frequently with its customers, focusing on those operating in higher risk industries. Any relevant information is presented to the Credit Committee.

As a result of the pandemic crisis, the loans portfolio was significantly reduced due to the implementation of the Liquidity Contingency Plan as the Bank's strategy to adjust the credit risk of the portfolio and prioritize liquidity. Initially, all operations were submitted for approval on a case-by-case basis by the Credit Committee with a meeting frequency of at least twice per week. Subsequently, the Bank progressively resumed originations with clients with good quality profiles with whom it maintained close commercial relationships and, based on the new information available, limits were raised for approval by the CPER for specific cases of short-term transactional clients with good financial situation.

The permanent review of transactions maturing in a 90-day horizon, has allowed the Bank to take quick actions to collect and to identify cases with a higher level of risk. Moreover, the Bank is assessing on a periodic basis the adequacy of the allowances for expected credit losses.

The Bank holds a low-risk portfolio, particularly due to the nature of its business, which focuses on a portfolio on financial institutions and corporations in the region and "quasi-sovereign" entities in strategic sectors, with whom it mainly conducts foreign trade operations. At December 31, 2020, 58% of placements were in investment grade countries, along with a short-term portfolio profile with 61% of the portfolio maturing within 1 year.

The Bank periodically assesses the adequacy and the validity of the allowance for expected credit losses calculation model. When assessing if the calculation model remains valid, characteristics and behavior of the loan portfolio are considered as a fundamental factor, as well as the active management by Risk and Business areas. Additionally, periodic and specific economic analyses that contribute to the active management of the portfolio are considered.

Given the current situation, the Bank has prepared 40 individual country risk analyses, as well as a comprehensive analysis at the beginning of the pandemic for 20 countries of Latin America and the Caribbean. Likewise, the results of the alert model have served as a guide to focus the consideration of the forward looking, which are duly incorporated in the rating models. In addition, statistical studies were conducted on the relationship between the quality of the loan portfolio and the behavior of the Latin American macroeconomic environment, concluding that these maintain a low correlation or a correlation that is not congruent with the behavior of the portfolio given the macroeconomic conditions. As a result of the above, the Bank has concluded that the methodology used remains valid in the context of the COVID-19 pandemic.

Banco Latinoamericano de Comercio Exterior, S. A. and Subsidiaries

Notes to the consolidated financial statements (Amounts expressed in thousands of U.S. dollars, unless otherwise indicated)

- 6. Financial risk management (continued)
 - iii. Market risk
 - The Bank's Management has not made any material adjustments to the Market Risk valuation metrics and models.
 - iv. Cybersecurity risk

Actions implemented due to the COVID-19 pandemic

The Bank successfully implemented its Business Continuity Plan, implicating among other things, that 100% of its staff is working remotely (Telecommuting).

This has increased the frequency of risks associated with cybersecurity, among them:

- Increased e-mail attack attempts.
- Increased attack attempts due to the widespread use of remote connection protocols.

To counteract these risks, the Bank's Management has reinforced the controls as follows:

- Monitoring of main attack vectors was expanded: e-mail and end-user devices.
- Awareness and training activities within the organization were reinforced.
- Frequency of vulnerability scans has been intensified.

7. Fair value of financial instruments

The Bank determines the fair value of its financial instruments using the fair value hierarchy, which requires the Bank to maximize the use of observable inputs (those that reflect the assumptions that market participants would use in pricing the asset or liability developed based on market information obtained from sources independent of the reporting entity) and to minimize the use of unobservable inputs (those that reflect the reporting entity's own assumptions about the inputs that market participants would use in pricing the asset or liability developed based on the best information available in the circumstances) when measuring fair value. Fair value is used on a recurring basis to measure assets and liabilities in which fair value is the primary basis of accounting. Additionally, fair value is used on a non-recurring basis to assess assets and liabilities for impairment or for disclosure purposes. Fair value is defined as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. Depending on the nature of the asset or liability, the Bank uses some valuation techniques and assumptions when estimating fair value.

The Bank applied the following fair value hierarchy:

Level 1 – Assets or liabilities for which an identical instrument is traded in an active market, such as publicly-traded instruments or futures contracts.

Level 2 – Assets or liabilities valued based on observable market data for similar instruments, quoted prices in markets that are not active; or other observable inputs that can be corroborated by observable market data for substantially the full term of the asset or liability.

Level 3 – Assets or liabilities for which significant valuation inputs are not readily observable in the market; instruments measured based on the best available information, which might include some internally-developed data, and considers risk premiums that a market participant would require.

When determining the fair value measurements for assets and liabilities that are required or permitted to be recorded at fair value, the Bank considers the principal or most advantageous market in which it would transact and considers the inputs that market participants would use when pricing the asset or liability. When possible, the Bank uses active markets and observable prices to value identical assets or liabilities.

7. Fair value of financial instruments (continued)

When identical assets and liabilities are not traded in active markets, the Bank uses observable market information for similar assets and liabilities. However, certain assets and liabilities are not actively traded in observable markets and the Bank must use alternative valuation techniques to determine the fair value measurement. The frequency of transactions, the size of the bid-ask spread, and the size of the investment are factors considered in determining the liquidity of markets and the relevance of observed prices in those markets.

When there has been a significant decrease in the valuation of the financial asset or liability, or in the level of activity for a financial asset or liability, the Bank uses the present value technique which considers market information to determine a representative fair value in usual market conditions.

A description of the valuation methodologies used for assets and liabilities measured at fair value on a recurring basis, including the general classification of such assets and liabilities under the fair value hierarchy is presented below:

A. <u>Recurring valuation</u>

Financial instruments at FVTPL and FVOCI

Financial instruments at FVTPL and FVOCI are carried at fair value, which is based upon quoted prices when available, or if quoted market prices are not available, on discounted expected cash flows using market rates commensurate with the credit quality and maturity of the security.

When quoted prices are available in an active market, financial instruments at FVTPL and financial instruments at FVOCI are classified in level 1 of the fair value hierarchy. If quoted market prices are not available or they are available in markets that are not active, then fair values are estimated based upon quoted prices for similar instruments, or where these are not available, by using internal valuation techniques, principally discounted cash flows models. Such securities are classified within levels 2 and 3 of the fair value hierarchy.

Derivative financial instruments and hedged items that qualify as a fair value hedging relationship

The valuation techniques and inputs depend on the type of derivative and the nature of the underlying instrument. Exchangetraded derivatives that are valued using quoted prices are classified within level 1 of the fair value hierarchy.

For those derivative contracts without quoted market prices, fair value is based on internal valuation techniques using inputs that are readily observable and that can be validated by information available in the market. The principal technique used to value these instruments is the discounted cash flows model and the key inputs considered in this technique include interest rate yield curves and foreign exchange rates. These derivatives are classified within level 2 of the fair value hierarchy.

The fair value adjustments applied by the Bank to its derivative carrying values include credit valuation adjustments ("CVA"), which are applied to OTC derivative instruments, in which the base valuation generally discounts expected cash flows using the Overnight Index Swap ("OIS") interest rate curves. Because not all counterparties have the same credit risk as that implied by the relevant OIS curve, a CVA is necessary to incorporate the market view of both, counterparty credit risk and the Bank's own credit risk, in the valuation.

Own-credit and counterparty CVA is determined using a fair value curve consistent with the Bank's or counterparty credit rating. The CVA is designed to incorporate a market view of the credit risk inherent in the derivative portfolio. However, most of the Bank's derivative instruments are negotiated bilateral contracts and are not commonly transferred to third parties. Derivative instruments are normally settled contractually, or if terminated early, are terminated at a value negotiated bilaterally between the counterparties. Therefore, the CVA (both counterparty and own-credit) may not be realized upon a settlement or termination in the normal course of business. In addition, all or a portion of the CVA may be reversed or otherwise adjusted in future periods in the event of changes in the credit risk of the Bank or its counterparties or due to the anticipated termination of the transactions.

Financial instruments assets and liabilities recognized and designated as hedged items that qualify as a fair value hedging relationship are measured at amortized cost and adjusted for the effect of the risks covered in the hedging relationship.

Banco Latinoamericano de Comercio Exterior, S. A. and Subsidiaries

Notes to the consolidated financial statements (Amounts expressed in thousands of U.S. dollars, unless otherwise indicated)

7. Fair value of financial instruments (continued)

A. Recurring valuation (continued)

Financial instruments measured at fair value on a recurring basis by caption on the consolidated statement of financial position using the fair value hierarchy are described below:

Total liabilities at fair value		14,675		14,675

Fair value calculations are provided only for a limited portion of assets and liabilities. Due to the wide range of valuation techniques and the degree of subjectivity used for estimates, comparisons of fair value information disclosed by the Bank with those of other companies may not be meaningful for comparative analysis.

Banco Latinoamericano de Comercio Exterior, S. A. and Subsidiaries

Notes to the consolidated financial statements (Amounts expressed in thousands of U.S. dollars, unless otherwise indicated)

7. Fair value of financial instruments (continued)

B. Non-recurring valuation

The following methods and inputs were used by the Bank's management in estimating the fair values of financial instruments whose fair value is not measured on a recurring basis:

Financial instruments with carrying value that approximates fair value

The carrying value of certain financial assets, including cash and due from banks, interest-bearing deposits in banks, customers' liabilities under acceptances and certain financial liabilities including customer's demand and time deposits, securities sold under repurchase agreements and acceptances outstanding, due to their short-term nature, is considered to approximate their fair value. These instruments are classified in level 2.

Securities at amortized cost

The fair value has been estimated upon current market quotations, where available. If quoted market prices are not available, fair value has been estimated based upon quoted prices of similar instruments, or where these are not available, on discounted expected future cash flows using market rates commensurate with the credit quality and maturity of the security. These securities are classified in levels 2 and 3.

Loans

The fair value of the loan portfolio, including impaired loans, is estimated by discounting expected future cash flows using the current rates at which loans would be made to borrowers with similar credit ratings and for the same remaining maturities, considering the contractual terms in effect as of December 31 of the relevant year. These assets are classified in levels 2 and 3.

Transfer of financial assets

Gains or losses on sale of loans depend in part on the carrying amount of the financial assets involved in the transfer, and their fair value at the date of transfer. The fair value of these instruments is determined based upon quoted market prices when available or is based on the present value of future expected cash flows using information related to credit losses, prepayment speeds, forward yield curves, and discounted rates commensurate with the risk involved.

Short and long-term borrowings and debt

The fair value of short and long-term borrowings and debt is estimated using discounted contractual future cash flows based on the current incremental borrowing rates for similar types of borrowing arrangements, considering the changes in the Bank's credit margin. These liabilities are classified in level 2.

(Amounts expressed in thousands of U.S. dollars, unless otherwise indicated)

7. Fair value of financial instruments (continued)

B. <u>Non-recurring valuation (continued)</u>

The following table provides information on the carrying value and the estimated fair value of the Bank's financial instruments that are not measured on a recurring basis:

	December 31, 2020				
	Carrying	Fair			
	value	value	Level 1	Level 2	Level 3
Assets

Customers' liabilities under acceptances	115,682	115,682	-	115,682	-

(1) The carrying value of securities at amortized cost is net of accrued interest receivable of \$1.9 million and the allowance for expected credit losses of \$0.4 million as of December 31, 2020 (accrued interest receivable of \$0.8 million and the allowance for expected credit losses of \$0.1 million as of December 31, 2019).

(2) The carrying value of loans at amortized cost is net of accrued interest receivable of \$27.3 million, the allowance for expected credit losses of \$41.1 million and unearned interest and deferred fees of \$5.8 million for December 31, 2020 (accrued interest receivable of \$41.7 million, the allowance for expected credit losses of \$99.3 million and unearned interest and deferred fees of \$12.1 million for December 31, 2019).

(3) Borrowings and debt exclude lease liabilities for an amount of \$18.7 million and \$19.9 million as of December 31, 2020 and December 31, 2019, respectively.

Banco Latinoamericano de Comercio Exterior, S. A. and Subsidiaries

Notes to the consolidated financial statements (Amounts expressed in thousands of U.S. dollars, unless otherwise indicated)

7. Fair value of financial instruments (continued)

C. Valuation framework

The Bank has an established control framework for the measurement of fair values, which is independent of front office management, to verify the valuation of significant fair value measurements of derivative financial instruments, securities and other financial instrument. Specific controls include:

- Verification of observable pricing. -
- Validation of performance of valuation models. -
- A review and approval process for new models and changes to existing models.
- Analysis and assessment of significant valuation fluctuations.
- instruments.

D. Level 3 - Fair value measurement

The following table presents the movement of a level 3 financial instruments measured at fair value:

	Debt instruments at fair value through profit or loss (<i>debentures</i>)	Loans at fair value through profit or loss	Total
At December 31, 2018			-
Additions	8,750	-	8,750
Net changes in fair value	(2,25 8)	-	(2,258)
Sales			
At December 31, 2019	6,492		6,492
Additions	1,433	5,750	7,183
Net changes in fair value	(2,175)	(801)	(2,976)
Sales	(5,750)		(5,750)
At December 31, 2020	-	4,949	4,949

For financial instruments measured at fair value in level 3 category, the Bank uses the following methodologies and inputs using present value techniques.

Loans at fair value through profit or loss - Level 3

The Bank realized the sale of the debt instrument measured at fair value through profit or loss for \$5.8 million. As a result, the Bank recognized a loan and classified it at fair value through profit or loss with a carrying amount of \$4.9 million as of December 31, 2020.

Inputs used in the fair value measurement are detailed as follows:

Observable inputs

- Forward interest rate referenced to 12M USD Libor

Fair value measurement sensitivity to unobservable inputs – discount rate

A significant increase in volatility would result in a lower fair 3.128% to 8.89% value

Review of significant unobservable inputs, valuation adjustments and changes to fair value measurement of Level 3

Unobservable inputs

- Discount rate or discount margin of floating rate bond "USD US composite B+" with credit risk similar to the instrument analyzed adjusted by the country risk premium.

2020

(Amounts expressed in thousands of U.S. dollars, unless otherwise indicated)

7. Fair value of financial instruments (continued)

D. Level 3 - Fair value measurement

As of December 31, 2020, Management used market data published in Bloomberg for the construction of the discount curve, which allows for a more accurate measurement of the instrument.

Loans at fair value through profit or loss - Level 3 (continued)

The effect of unobservable inputs on fair value measurement

Although the Bank believes that its estimates of fair value are appropriate, the use of different methodologies or assumptions could lead to different fair value measurements. For fair value measurements in level 3, changing one or more of the assumptions used would have the following effects.

Loans at fair value through profit or loss	<u>Effect on profit</u> <u>or loss</u>
+ 100 bps to the observable and unobservable inputs	(149)
- 100 bps to the observable and unobservable inputs	154

Debt instruments "debentures" at fair value through profit or loss - Level 3

The significant inputs used in determining the fair value of instruments categorized as level 3, using present value techniques, are as follows:

2020	2019)
Unobservable inputs	Unobservable inputs	
- Discount rate based on the return from CCC Corporate S&P Bond Index	- Discount rate for similar companies of the same business lin adjusted due to the debt-equity structure of the issuer	
- Probability of occurrence of the flows of each sale or conversion scenario		
	Observable inputs	
	- Average recovery factor for con Moody's	npanies that reported default –
	Range	of estimates
Fair value measurement sensitivity to unobservab discount rate	<u>ble inputs –</u> 2020	2019

(1) The loss allowance for losses for securities at FVOCI is included in equity in the consolidated statement of financial position in the line Other comprehensive income. As December 31, 2020 and 2019 the principal plus interest receivable of securities at FVOCI is \$232,504 and \$5,142, respectively.

As of December 31, 2020, and 2019, the Bank sold 261,164 and 767,301 shares, respectively, which were designated at their initial recognition at fair value with changes in other comprehensive income due to market changes affecting the liquidity of the instrument.

The cumulative fair value of the shares sold was \$1.7 million and \$4.8 million, respectively, and the cumulative loss recognized in OCI was \$602 thousand and \$151 thousand, respectively, transferred to retained earnings.

Securities and other financial assets by contractual maturity are shown in the following table:

		At fair value

10. Loans

The following table presents the loan portfolio according to its classification and subsequent measurement:

	December 31, 2020	December 31, 2019
Loans at amortized cost	4,911,397	5,892,997
Interest receivable	27,350	41,757
Loss allowances	(41,165)	(99,307)
Unearned interest and deferred fees	(5,884)	(12,114)
Loans at amortized cost, net	4,891,698	5,823,333
Loans at fair value through profit or loss ⁽¹⁾	4,949	
Loans, net	4,896,647	5,823,333

⁽¹⁾ The Bank realized the sale of debt instruments measured at fair value through profit or loss for \$5.8 million. As a result, the Bank recognized a loan and classified it at fair value through profit or loss with a carrying amount of \$4.9 million as of December 31, 2020.

The fixed and floating interest rate distribution of the loan portfolio is as follows:

	December 31, 2020	December 31, 2019
Fixed interest rates	2,544,544	2,757,333
Floating interest rates	2,371,802	3,135,664
Total	4,916,346	5,892,997

As of December 31, 2020, and 2019, 41% and 74% of the loan portfolio at fixed interest rates has remaining maturities of less than 180 days. The range of interest rates on loans fluctuates from 0.43% to 9.70% (December 31, 2019 1.20% to 13.93%).

The following table details information relating to loans granted to class A and B shareholders:

	December 31, 2020	December 31, 2019
Class A and B shareholder loans	522,316	664,447
% Loans to class A and B shareholders over total loan portfolio	11%	11%
% Class A and B stockholders with loans over number of class A and B stockholders	12%	11%

10. Loans (continued)

Modified financial assets

The following table refers to modified financial assets during the year, where modification does not result in de-recognition:

Gross carrying amount before modification Allowance loss before modification ⁽¹⁾ Net amortized cost before modification

Gross carrying amount after modification

Allowance loss after modification ⁽²⁾ Net amortized cost after modification

⁽¹⁾ Expected credit loss for 12 months.
 ⁽²⁾ Expected credit loss within the life of the financial asset.

Recognition and derecognition of financial assets

During the year ended December 31, 2020, a Stage 3 impaired loan was sold for \$11.6 million and a Stage 2 loan with a significant increase in credit risk was sold for \$13.2 million, both classified at amortized cost. This resulted in a write-off against reserves of \$56.1 million. These sales were made based on compliance with the Bank's strategy to optimize credit risk of its loan portfolio.

During the years ended December 31, 2019 and 2018, the Bank sold loans measured at amortized cost. These sales were made based on compliance with the Bank's strategy to optimize credit risk of its loan portfolio.

The carrying amounts and gains arising from the derecognition of these financial instruments are presented in the following table. These gains are presented within the line "Loss on financial instruments, net" in the consolidated statement of profit or loss.

11. Loan commitments and financial guarantee contracts

In the normal course of business, to meet the financing needs of its customers, the Bank is party to loan commitments and financial guarantee contracts. These instruments involve, to varying degrees, elements of credit and market risk in excess of the amount recognized in the consolidated statement of financial position. Credit risk represents the possibility of loss resulting from the failure of a customer to perform in accordance with the terms of a contract.

The Bank's outstanding loan commitments and financial guarantee contracts are as follows:

	December 31,	December 31,
	2020	2019
Documentary letters of credit	21 6,782	169,320
Stand-by letters of credit and guarantees - commercial risk	21 0,497	255,481
Credit commitments	13 7,619	68,571
Total loans commitments and financial guarantee contracts	564,898	493,372

The remaining maturity profile of the Bank's outstanding loan commitments and financial guarantee contracts is as follows:

Maturities	December 31,	December 31,
	2020	2019
Up to 1 year	41 9,015	42 4,744
From 1 to 2 years	75,883	8, 628
Over 2 to 5 years	70,000	60,000
Total	564,898	493,372

12. Gain (loss) on financial instruments, net

The following table sets forth the details for the gain or loss on financial instruments recognized in the consolidated statements of profit or loss:

13. Derivative financial instruments (continued)

As part of the financial risk management, the Bank uses the following hedging relationships:

- Fair value hedge
- -Cash flow hedge
- Net investment hedge -

For control purposes, derivative instruments are recorded at their nominal amount in memoranda accounts. Interest rate swaps are made either in a single currency or cross currency for a prescribed period to exchange a series of interest rate flows, which involve fixed for floating interest payments, and vice versa. The Bank also engages in certain foreign exchange forward contracts to serve customers' transaction needs and to manage foreign currency risk. All such positions are hedged with an offsetting contract for the same currency.

The Bank manages and controls the risks on these foreign exchange trades by establishing counterparty credit limits by customer and by adopting policies that do not allow for open positions in the loan and investment portfolios. The Bank also uses foreign exchange forward contracts to hedge the foreign exchange risk associated with the Bank's equity investment in a non-U.S. dollar functional currency foreign entity. Derivative and foreign exchange forward instruments negotiated by the Bank are executed mainly over-the-counter (OTC). These contracts are executed between two counterparties that negotiate specific agreement terms, including notional amount, exercise price and maturity.

A. Fair value hedges

This type of hedge is used to mitigate the risk of changes in foreign exchange currency rates, as well as changes in interest rate risk. Within the derivative financial instruments used by the Bank for fair value hedging are interest rate swap contracts whereby a series of interest rate flows in a single currency are exchanged over a prescribed period and cross currency swaps contracts that generally involve the exchange of both interest and principal amounts in two different currencies.

The Bank's exposure to interest rate risk is disclosed in Note 5(C)(i). Interest rate risk to which the Bank applies hedge accounting arises from fixed-rate euro medium term notes and other long-term notes issuances ("Certificados Bursatiles"), fixedrate loans and advances, whose fair value fluctuates when benchmark interest rates change. The Bank hedges interest rate risk only to the extent of benchmark interest rates because the changes in fair value of a fixed-rate note or loan are significantly influenced by changes in the benchmark interest rate. Hedge accounting is applied where economic hedging relationships meet the hedge accounting criteria.

Before fair value hedge accounting is applied by the Bank, the Bank determines whether an economic relationship between the hedged item and the hedging instrument exists based on an assessment of the qualitative characteristics of these items and the hedged risk that is supported by quantitative analysis. The Bank considers whether the critical terms of the hedged item and hedging instrument closely align when assessing the presence of an economic relationship. The Bank assesses whether the fair value of the hedged item and the hedging instrument respond similarly to similar risks. The Bank further supports this qualitative assessment by using regression analysis to assess whether the hedging instrument is expected to be and has been highly effective in offsetting changes in the fair value of the hedged item. The sources of ineffectiveness mainly come from forward rates, discount rates and cross currency basis (cost of the operation).

Banco Latinoamericano de Comercio Exterior, S. A. and Subsidiaries

Notes to the consolidated financial statements (Amounts expressed in thousands of U.S. dollars, unless otherwise indicated)

13. Derivative financial instruments (continued)

B. Fair value hedges (continued)

Fair value hedge		interest	Total 350,000
Maturity Fair value hedge Less than 1 year Over 1 to 2 years	s waps	interest	
Fair value hedge Less than 1 year	s waps 	interest	350,000

B. Cash flow hedges

This type of hedge is used to mitigate the risk of changes in foreign exchange currency rates, as well as changes in interest rate risk, that could include variability in the future cash flows. Within the derivative financial instruments used by the Bank for cash flow hedging are interest rate swaps contracts whereby a series of interest rate flows in a single currency are exchanged over a prescribed period, cross currency swaps contracts that generally involve the exchange of both interest and principal amounts in two different currencies, and foreign exchange forward contracts, an agreement to purchase or sell foreign currency at a future date at agreed-upon terms.

The Bank's exposure to market risk is disclosed in Note 5 (C) (ii) and (iii). The Bank determines the amount of the exposure to which it applies hedge accounting by assessing the potential impact of changes in interest rates and foreign currency exchange rates on the future cash flows. This assessment is performed using analytical techniques, such as cash flow sensitivity analysis. As noted above for fair value hedges, by using derivative financial instruments to hedge exposures to changes in interest rates and foreign currency exchange rates, the Bank exposes itself to credit risk of the counterparties to the derivatives, which is not offset by the hedged items. This exposure is managed similarly to that of fair value hedges.

December 31, 2020 Foreign

(Amounts expressed in thousands of U.S. dollars, unless otherwise indicated)

13. Derivative financial instruments (continued)

B. Cash flow hedges (continued)

The Bank determines whether an economic relationship exists between the cash flows of the hedged item and the hedging instrument based on an assessment of the qualitative characteristics of these items and the hedged risk that is supported by quantitative analysis. The Bank considers whether the critical terms of the hedged item and the hedging instrument closely align when assessing the presence of an economic relationship. The Bank assesses whether the cash flows of the hedged item and the hedging instrument respond similarly to the hedged risk, such as the benchmark interest rate or foreign currency. The Bank further supports this qualitative assessment by using sensitivity analysis to assess whether the hedging instrument is expected to be and has been highly effective in offsetting changes in the present value of the hedged item. The Bank assesses hedge effectiveness using the hypothetical derivative method, which creates a derivative instrument to serve as a proxy for the hedged transaction. The terms of the hypothetical derivative match the critical terms of the hedged item and it has a fair value of zero at inception. The sources of ineffectiveness arise mainly because of the differences in discount rates (OIS - Overnight Index Swap).

The maximum length of time over which the Bank has hedged its exposure to the variability in future cash flows on forecasted transactions is 7 years.

The Bank recognized the lifetime associated cost of the foreign exchange forward contracts into interest income, in profit or loss, as an adjustment to the yield on hedged items creating an accumulated reserve in OCI, reclassified to profit or loss at their maturity. The Bank estimates that approximately \$508 thousand are expected to be reclassified into profit or loss during the period of 12 months ending December 31, 2021.

The Bank recognized the associated costs for the forward foreign exchange contracts where the hedged item is an asset, as an integral part interest income (expense) of the underlying transaction, presented in the consolidated statement of profit or loss and as an accumulated reserve in Other comprehensive income in the consolidated statement of financial position, which at maturity of the transaction is reclassified to profit or loss.

The Bank recognized the associated costs for the forward foreign exchange contracts where the hedged item is a liability, as an integral part interest expense (expense) of the underlying transaction, presented in the consolidated statement of profit or loss and as an accumulated reserve in Other comprehensive income in the consolidated statement of financial position, which at maturity of the transaction is reclassified to profit or loss.

Banco Latinoamericano de Comercio Exterior, S. A. and Subsidiaries

Notes to the consolidated financial statements (Amounts expressed in thousands of U.S. dollars, unless otherwise indicated)

13. Derivative financial instruments (continued)

B. Cash flow hedges (continued)

The following table details the notional amounts and carrying amounts of derivative instruments used in cash flow hedges by type of risk and hedged item, along with the changes during the period used to determine and recognize the ineffectiveness of the hedge:

C. Net investment hedge

A foreign currency exposure arises from a net investment either in a subsidiary that has a different functional currency from that of the Bank or in a financial instrument in a foreign currency designated at FVOCI. The hedge risk in the net investment hedge is the variability of the US dollar against any other foreign currency that will result in a reduction in the carrying amount.

The Bank's policy is to hedge the net investment only to the extent of the debt principal; therefore, the hedge ratio is established by aligning the principal amount in foreign currency of the debt with the carrying amount of the net investment that is designated.

When the hedging instrument is a forward foreign exchange contract, the Bank establishes a hedge relationship where the notional of the forward foreign exchange contract matches the carrying amount of the designated net investment. The Bank ensures that the foreign currency in which the hedging instrument is denominated is the same as the functional currency of the net investment. The only source of ineffectiveness that is expected to arise from these hedging relationships is due to the effect of the counterparty and the Bank's own credit risk on the fair value of the derivative. As of December 30, 2020, The Bank holds no net investment hedges.

(Amounts expressed in thousands of U.S. dollars, unless otherwise indicated)

13. Derivative financial instruments (continued)

C. Net investment hedge (continued)

The following table details the notional amount and carrying amount of the derivative instruments used as net investment hedge at December 31, 2019 by type of risk and hedged item, along with changes during the period used to determine and recognize the ineffectiveness of the hedge:

	December 31, 2019

Leases

The following is the detail of the movement of right-of-use assets on the leases for which the Bank is a lessee:

Initial balance Additions Depreciation of right-of-use assets Effect of changes in exchange rates Reclassification to investment property

Decrease Ending balance

The Bank leases office spaces in buildings. The lease of main office space typically runs for a period of 15 years, and for the representative offices from 3 to 5 years. Some leases include an option to renew the lease for a similar additional period after the end of the contract term.

The Bank sub-leases some of its property under operating leases. As of December 31, 2019, these contracts were reclassified as investment properties – right of use, as described in Note 17.

	2020	2019	2018	
Interest expense on deposits made in the New York Agency	5,035	6,277	5,937	

20. Securities sold under repurchase agreements

As of December 31, 2020, and 2019, the Bank had financing transactions under repurchase agreements for \$10.7 million and \$40.5 million, respectively.

During the years ended December 31, 2020, 2019 and 2018, interest expense related to financing transactions under repurchase agreements totaled \$432 thousand, \$1.1 million and \$635 thousand, respectively. These expenses are included as interest expense – borrowings and debt line in the consolidated statement of profit or loss.

Banco Latinoamericano de Comercio Exterior, S. A. and Subsidiaries

Notes to the consolidated financial statements (Amounts expressed in thousands of U.S. dollars, unless otherwise indicated)

21. Borrowings and debt

Borrowings consist of bilateral funding and syndicated loans obtained from international banks. Debt instruments consist of public and private issuances under the Bank's Euro Medium Term Notes Program ("EMTN") as well as public issuances in the Mexican and Japanese markets.

The Bank's funding activities include: (i) EMTN, which may be used to issue notes for up to \$2.250 million, with maturities from 7 days up to a maximum of 30 years, at fixed or floating interest rates, or at discount, and in various currencies. The notes are generally issued in bearer or registered form through one or more authorized financial institutions; (ii) Short-and Long-Term Notes ("Certificados Bursatiles") Program (the "Mexican Program") in the Mexican local market, registered with the Mexican National Registry of Securities administered by the National Banking and Securities Commission in Mexico ("CNBV", for its acronym in Spanish), for an authorized aggregate principal amount of 10 billion Mexican pesos with maturities from 1 day to 30 years.

Some borrowing agreements include various events of default and covenants related to minimum capital adequacy ratios, incurrence of additional liens, and asset sales, as well as other customary covenants, representations and warranties. As of December 30, 2020, the Bank was in compliance with all those covenants.

Borrowings and debt are detailed as follows:

	Determiter 51, 2020						
_		Short-Term			Long-term		
Carrying amount	Borrowings	Debt	Lease Liabilities	Borrowings	Debt	Lease Liabilities	Total

24. Capital and Reserves

A. Common stock and additional paid-in capital

Common stock

The Bank's common stock is divided into four categories:

- 1) "Class A"; shares may only be issued to Latin American Central Banks or banks in which the state or other government agency is the majority shareholder.
- 2) "Class B"; shares may only be issued to banks or financial institutions.
- 3) "Class E"; shares may be issued to any person whether a natural person or a legal entity.
- 4) "Class F"; may only be issued to state entities and agencies of non-Latin American countries, including, among others, central banks and majority state-owned banks in those countries, and multilateral financial institutions either international or regional institutions.

The holders of "Class B" shares have the right to convert or exchange their "Class B" shares, at any time, and without restriction, for "Class E" shares, exchanging one share for another share.

The following table provides detailed information on the movement of the shares by class for each of the years ended December 31, 2020, 2019 and 2018:

(Share units) Authorized	<u>"Class A"</u> 40,000,000	"Class B" 40,000,000	"Class E" 100,000,000	"Class F" 100,000,000	Total 280,000,000
Outstanding at January 1, 2018	6,342,189	2,408,805	30,677,840	-	39,428,834

26. Fee and commission income (continued)

The following table provides information on the ordinary income that is expected to be recognized on the contracts in force:

Up to 1 year From 1 to 2 years More than 2 years

27. Business segment information

The Bank's activities are managed and executed in two business segments: Commercial and Treasury. Information related to each reportable segment is set out below. Business segment results are based on the Bank's managerial accounting process, which assigns assets, liabilities, revenue and expense items to each business segment on a systematic basis. The maximum decision-making operating authority of the Bank is represented by the Chief Executive Officer and the Executive Committee, who review the internal management reports for each division at least every six months. Segment profit, as included in the internal management reports is used to measure performance as management believes that this information is the most relevant in evaluating the results of the respective segments relative to other entities that operate within the same industry.

The Bank's net interest income represents the main driver of profits; therefore, the Bank presents its interest-earning assets by business segment, to give an indication of the size of business generating net interest income. Interest-earning assets also generate gains and losses on sales, mainly from financial instruments at fair value through OCI and financial instruments at fair value through profit or loss, which are included in other income, net. The Bank also discloses its other assets and contingencies by business segment, to give an indication of the size of business that generates net fees and commissions, also included in net other income.

The Commercial Business Segment encompasses the Bank's core business of financial intermediation and fee generating activities developed to cater to corporations, financial institutions and investors in Latin America. These activities include the origination of bilateral short-term and medium-term loans, structured and syndicated credits, loan commitments, and financial guarantee contracts such as issued and confirmed letters of credit, stand-by letters of credit, guarantees covering commercial risk, and other assets consisting of customers' liabilities under acceptances.

Profits from the Commercial Business Segment include (i) net interest income from loans; (ii) fees and commissions from the issuance, confirmation, negotiation, acceptance and amendment of letters of credit, guarantees and loan commitments, and through loan structuring and syndication activities; (iii) gain on sale of loans generated through loan intermediation activities, such as sales and distribution in the primary market; (iv) gain (loss) on sale on financial instruments measured at FVTPL; (v) reversal of (provision) for credit losses, (vi) gain (loss) on other non-financial assets, net; and (vii) direct and allocated operating expenses.

	361
	763
	3,041

27. Business segment information (continued)

The Treasury Business Segment focuses on managing the Bank's investment portfolio, and the overall structure of its assets and liabilities to achieve more efficient funding and liquidity positions for the Bank, mitigating the traditional financial risks associated with the consolidated statements of financial position, such as interest rate, liquidity, price and currency risks. Interestearning assets managed by the Treasury Business Segment include liquidity positions in cash and cash equivalents, as well as highly liquid corporate debt securities rated above 'A-', and financial instruments related to the investment management activities, consisting of securities at fair value through other comprehensive income ("FVOCI") and securities at amortized cost (the "Investment Portfolio"). The Treasury Business Segment also manages the Bank's interest-bearing liabilities, which constitute its funding sources, mainly deposits, short- and long-term borrowings and debt.

Profits from the Treasury Business Segment include net interest income derived from the above mentioned treasury assets and liabilities, and related net other income (net results from derivative financial instruments and foreign currency exchange, gain (loss) on financial instruments at FVTPL, gain (loss) on sale of securities at FVOCI, and other income), recovery or impairment loss on financial instruments, and direct and allocated operating expenses.

The following table provides certain information regarding the Bank's operations by segment:

	December 31, 2020			
	Commercial	Treasury	Total

The Bank applied IFRS 16, as of January 1, 2019, using the modified retrospective approach to recognize right-of-use assets for \$17.4 million presented within equipment and leasehold improvements and lease liabilities for \$20.9 million. As of December 31, 2020, assets and liabilities were allocated between Commercial and Treasury segments.

As a result of the adoption of the new standard in the year 2019, certain amounts related to equipment and leasehold improvements and intangibles were reclassified for presentation purposes in the consolidated financial statements.

Geographic information

The geographic information analyses the Bank's revenue and non-current assets by the Bank's country of domicile and other countries. In presenting the geographic information below, segment revenue is based on customer's country risk and segment non-current assets are based on the geographic location of the assets.

28. Related party transactions (continued)

The total compensation paid to directors and the executives as representatives of the Bank amounted to:

	December 31,			
	2020	2019	2018	
<u>Expenses:</u>				
Compensation costs to directors	2,033	2,2 89	2,331	
Compensation costs to executives	5,448	3,2 44	4,943	

Compensation costs to directors and executives, include annual cash retainers and the cost of granted restricted stock and restricted stock units.

29. Salaries and other employee expenses

The following table details salaries and other employee expenses:

	December 31,			
	2020	2019	2018	
Wages and salaries	13,717	13,232	18,487	
Payroll taxes	1,7 22	1,721	2,120	
Personnel benefits	5,3 83	8,867	6,732	
Share-based payments	640	359	650	
Total	21,462	24,179	27,989	

A. Cash and stock-based compensation plans

The Bank has established equity compensation plans under which it manages restricted stock, restricted stock units and stock purchase option plans to attract, retain and motivate directors and top employees and compensate them for their contributions to the growth and profitability of the Bank. Vesting conditions for each of the Bank's plans are only comprised of specified requisite service periods.

<u>2015 Stock Incentive Plan – Directors and Executives</u>

In February 2008, the Board of Directors of the Bank approved an incentive plan for directors and executives allowing the Bank to grant restricted stock, restricted stock units, stock purchase options, and/or other similar compensation instruments. The maximum aggregate number of shares which may be granted under this plan is three million "Class E" common shares. The 2008 Stock Incentive Plan is administered by the Board of Directors who has the authority at its discretion to select the directors and executives to whom the awards may be granted; to determine whether and to what extent awards are granted, and toamend the terms of any outstanding award under this plan. This plan was updated in October 2015, modified and renamed as "2015 Stock Incentive Plan"

Restricted stocks are issued at the grant date but are withheld by the Bank until the vesting date. Restricted stock is entitled to receive dividends. A restricted stock unit is a grant valued in terms of the Bank's stock, but no stock is issued at the grant date. Restricted stock units are not entitled to dividends. The Bank issues or disposes of treasury stock and delivers common stock at the vesting date of the restricted stock units.

During 2020, 2019 and 2018, the Board of Directors approved the grant of restricted stock to directors and stock options and restricted stock units to certain executives of the Bank, as follows:

Banco Latinoamericano de Comercio Exterior, S. A. and Subsidiaries

Notes to the consolidated financial statements (Amounts expressed in thousands of U.S. dollars, unless otherwise indicated)

29. Salaries and other employee expenses (continued)

A. Cash and stock-based compensation plan (continued)

Restricted stock – Directors

For the year 2020, the Board of Directors granted 63,000 "Class E" common shares.

During the years 2019 and 2018, the Board of Directors granted 57,000, each year, of "Class E" common shares. The fair value of restricted stock granted was based on the stock closing price in the New York Stock Exchange of the "Class E" shares on April 29, 2020, April 17, 2019 and April 11, 2018. The fair value of restricted stock granted totaled \$727 thousand in 2020, \$1.3 million in 2019, and \$1.6 million in 2018, of which \$306 thousand, \$570 thousand and \$739 thousand were recognized in profit or loss during 2020, 2019 and 2018, respectively.

The total expense recognized in profit or loss during 2020, 2019 and 2018 of restricted stock - directors amounted \$1.1 million, \$1.4 million and \$1.5 million, respectively. The remaining cost pending amortization of \$699 thousand at December 31, 2020 will be amortized over 2.33 years.

Restricted stock loses their restriction from the year following the anniversary date, as follows: 35% in the first and second years, and 30% in the third year.

A summary of restricted stock granted to Directors is presented below:

Outstanding at January 1, 2018
Granted
Vested
Outstanding at December 31, 2018
Granted
Vested
Outstanding at December 31, 2019
Granted
Vested
Outstanding at December 31, 2020
Expected to vest

The fair value of vested stock during the years 2020, 2019 and 2018 was \$1.1 million, \$1.4 million and \$1.3 million, respectively.

Restricted stock units and stock purchase options granted to certain executives

The Board of Directors approved the grant of stock purchase options and restricted stock units to certain executives of the Bank with a grant date fair value of \$902 thousand in 2020, \$355 thousand in 2019 and \$581 thousand in 2018. The distribution of the fair value was in restricted stock units.

Restricted stock units

The fair value of the restricted stock units was based on the "Class E" stock closing price in the New York Stock Exchange on the grant date. These stock units vest 25% each year on the grant date's anniversary. The restricted stock units are exchanged at a ratio of 1: 1 for common shares "Class E".

29. Salaries and other employee expenses (continued)

A. Cash and stock-based compensation plan (continued)

Restricted Stock Units and Stock Purchase Options granted to certain Executives (continued)

Compensation costs of the restricted stock units are amortized during the period of restriction by the accelerated method. During 2020, 2019 and 2018, the cost recognized in profit or loss as a result of the amortization of these grants totaled \$640 thousand, \$359 thousand and \$503 thousand, respectively. The remaining compensation cost pending amortization of \$583 thousand in 2020 will be amortized over 3.17 years.

A summary of the restricted stock units granted to certain executives is presented below:

			Weighted	
		Weighted average grant	average remaining contractual	Aggregate
	Shares	date fair value	term	intrinsic value
Outstanding at January 1, 2018	50,805	21.07

Expected to vest	81,343	17.93	2.60 years	15.71

The fair value of vested stock during the years 2020, 2019 and 2018 is \$256 thousand, \$168 thousand, and \$1 million, respectively.

Stock purchase options

The Bank's policy indicates that options expire seven years after the grant date and are exercisable at a rate of 25% each year on the grant date's anniversary.

Banco Latinoamericano de Comercio Exterior, S. A. and Subsidiaries

Notes to the consolidated financial statements (Amounts expressed in thousands of U.S. dollars, unless otherwise indicated)

29. Salaries and other employee expenses (continued)

A. Cash and stock-based compensation plan (continued)

Restricted Stock Units and Stock Purchase Options granted to certain Executives (continued)

Related cost recognized in profit or loss during 2018 as a result of the amortization of these plans amounted to \$14 thousand.

A summary of stock options granted is presented below:

	Options	Weighted average exercise price	Weighted average remaining contractual term	Aggregate intrinsic value
Outstanding at January 1, 2018	273,643	27.48		
Granted	-	-

Exercisable	142,410	29.25	1.11 years	-
Expected to vest				

During 2020 and 2019 there were no options exercised. The intrinsic value of exercised options during the years 2018 was \$406 thousand. During 2018, the Bank received \$2.5 million from exercised options.

B. Other plans - Expatriate Top Executives Plan

The Bank sponsors a defined contribution plan for its expatriate top executives based in Panama, which are not eligible to participate in the Panamanian social security system. The Bank's contributions are determined as a percentage of the annual salaries of top executives eligible for the plan, each contributing an additional amount withheld from their salary. Contributions to this plan are managed by a fund manager through a trust. The executives are entitled to the Bank's contributions after completing at least three years of service in the Bank. During the years 2020, 2019 and 2018, the Bank charged to salaries expense \$75 thousand, \$87 thousand and \$102 thousand, respectively, that correspond to the Bank's contributions to this plan.

31. Litigation

Bladex is not engaged in any litigation that is significant to the Bank's business or, to the best of the knowledge of Bank's management, that is likely to have an adverse effect on its business, consolidated financial position or its consolidated financial performance.

32. Applicable laws and regulations

Liquidity index

Rule No. 2-2018 issued by the Superintendence of Banks of Panama (SBP) establishes that every general license or international license bank must guarantee, with a higher level of confidence, that it is in the position to face its intraday liquidity obligations in a period when liquidity pressure may affect the lending market. For that purpose, the Superintendence of Banks of Panama has established a short-term liquidity coverage ratio known as "Liquidity Coverage Ratio or LCR". This ratio is measured through the quotient of two amounts, the first one corresponds to the high-quality liquid assets and the second one corresponds to the net cash outflows in 30 days.

As of December 31, 2020, and 2019, the minimum LCR to be reported to the SBP was 65% and 50%, respectively. The Bank's LCR as of December 31, 2020 and 2019 was 249% and 131%, respectively.

Rule No. 4-2008 issued by the SBP establishes that every general license or international license bank must maintain, always, a minimum balance of liquid assets equivalent to 30% of the gross total of its deposits in the Republic of Panama or overseas up to 186 days, counted from the reporting date. The formula is based on the following parameters:

Liquid assets x 100 = X% (Liquidity ratio) Liabilities (Deposits Received)

As of December 31, 2020, and 2019, the percentage of the liquidity index reported by the Bank to the regulator was 79.99% and 100.36%, respectively.

Capital adequacy

The Banking Law in the Republic of Panama and the Rules No. 01-2015 and 03-2016 require that the general license banks maintain a total capital adequacy index that shall not be lower, at any time, than 8% of total assets and off-balance sheet irrevocable contingency transactions, weighted according to their risks; and ordinary primary capital that shall not be less than 4.5% of its assets and off-balance sheet transactions that represent an irrevocable contingency, weighted based on their risks; and a primary capital that shall not be less than 6% of its assets and off-balance sheet transactions that represent an irrevocable contingency, weighted based on their risks;

Banco Latinoamericano de Comercio Exterior, S. A. and Subsidiaries

Notes to the consolidated financial statements (Amounts expressed in thousands of U.S. dollars, unless otherwise indicated)

32. Applicable laws and regulations (continued)

The primary objectives of the Bank's capital management policy are to ensure that the Bank complies with capital requirements imposed by local regulator and maintains strong credit ratings and healthy capital ratios to support its business and tomaximize shareholder value.

The Bank manages its capital structure and adjusts it according to changes in economic conditions and the risk characteristics of its activities. To maintain or adjust the capital structure, the Bank may adjust the amount of dividend payment to shareholders, return capital to shareholders or issue capital securities. No changes have been made to the objectives, policies and processes from the previous periods. However, they are under constant review by the Board.

Capital funds

Risk-weighted assets

Capital adequacy index

Leverage ratio

Article No. 17 of the Rule No. 1-2015 establishes the leverage ratio of a regulated entity by means of the quotient between the ordinary primary capital and the total exposure for non-risk-weighted assets inside and outside the consolidated statement of financial position established by the SBP. For the determination of the exposure of off-balance-sheet operations, the criteria established for credit and counterparty credit risk positions will be used. The exposure of the derivatives will be the fair value at which it is recorded in the entity's assets.

The leverage ratio cannot be lower, at any time, than 3%. The Bank will inform to SBP as often as the compliance with the leverage ratio is determined.

Ordinary capital

Non-risk-weighted assets

Leverage ratio

Specific credit provisions

SBP Rule No. 4-2013, modified by Rule No. 8-2014, states that the specific provisions are originated from the objective and concrete evidence of impairment. These provisions must be established for credit facilities classified according to the risk categories denominated as: special mention, substandard, doubtful, or unrecoverable, both for individual credit facilities as for a group of such facilities. In the case of a group, it corresponds to circumstances that indicate the existence of deterioration in credit quality, although individual identification is still not possible.

Banks must calculate and maintain at all times the amount of the specific provisions determined by the methodology specified in this Rule, which takes into account the balance owed of each credit facility classified in any of the categories subject to provision, mentioned in the paragraph above; the present value of each guarantee available in order to mitigate risk, as established by type of collateral; and a weighting table that applies to the net exposure balance subject to loss of such credit facilities.

December 31, 2020	December 31, 2019
1,048,182	1,026,125
5,187,054	5,937,648
20.21%	17.28%

December 31, 2020	December 31, 2019
912,164	890,106
6,479,416	7,323,187
14.08%	12.15%

(Amounts expressed in thousands of U.S. dollars, unless otherwise indicated)

32. Applicable laws and regulations (continued)

Article No. 34 of this Rule establishes that all credits must be classified in the following five (5) categories, according to their default risk and loan conditions, and establishes a minimum reserve for each classification: normal 0%, special mention 20%, substandard 50%, doubtful 80%, and unrecoverable 100%.

If there is an excess in the specific provision, calculated in accordance with this Rule, compared to the provision calculated in accordance with IFRS, this excess will be accounted for as a regulatory credit reserve in equity and will increase or decrease with appropriations from/to retained earnings. The balance of the regulatory credit reserve will not be considered as capital funds for calculating certain ratios or prudential indicators mentioned in the Rule.

Based on the classification of risks, collateral and in compliance with SBP Rule No. 4-2013, the Bank classified the loan portfolio as follows:

	December 31, 2020

Credit risk coverage - dynamic provision

The SBP by means of Rule No. 4-2013, establishes the compulsory constitution of a dynamic provision in addition to the specific credit provision as part of the total provisions for the credit risk coverage.

The dynamic provision is an equity item associated to the regulatory capital but does not replace or offset the capital adequacy requirements established by the SBP.

Modified Special Mention loans

SBP Rule No. 2-2020, which as an amendment to Rule 4-2013, with effect on March 31, 2020, allows banks to grant a grace period to customers affected in their businesses, regarding the COVID-19 effects, until June 30, 2020. As of that date, and as a result of an agreement signed between the Government of Panama and the Banking Association of Panama, as well as the issuance of Law No. 156 on moratorium, extended the financial relief to those affected by COVID-19 and who requested it until December 31, 2020. Subsequently, Rule No. 13-2020 which arise as an amendment to Rule No. 2-2020, with effect on October 2020 allows an additional grace of period to the financial relief until June 30, 2021.

On September 11, 2020, the Superintendence of Banks of Panama issued Rule No. 9-2020 amending Rule No. 2-2020 of March 16, 2020, by which, it defines that loans classified as normal and special mention, as well as restructured loans without arrears, may be modified in accordance with the guidelines established herein. Moreover, the loans amended in normal and special mention categories shall be classified in "modified special mention" category for the purpose of determining the respective provisions. Modified restructured loans in the substandard, doubtful or unrecoverable categories shall maintain the credit classification they had at the time of their modification with their respective provision.

In accordance with the Rule referred to in the preceding paragraph, about the modified special mention loan portfolio, banks will create a provision equivalent to the highest value between the IFRS provision of the modified special mention category and a generic provision equivalent to three percent (3%) of the gross balance of the modified loan portfolio, including uncollected accrued interest and capitalized interests; modified loans secured with deposits pledged in the same bank may be excluded from this calculation up to the secured amount. For this, the following scenarios will be considered:

- 1. In cases where the IFRS provision is equal to or greater than the generic provision of 3% established herein, the Bank will record the corresponding IFRS provision in the profit or loss of the year.
- 2. In cases where the IFRS provision is less than the generic provision of 3% established herein, the Bank will record such IFRS provision in the profit or loss and the difference must be record in the results or in a regulatory reserve in equity, taking into consideration the following aspects:
 - i. When the IFRS provision is equal to or greater than 1.5%, the Bank must record such IFRS provision in the profit or loss. Likewise, the difference to complete the 3% of the generic provision established herein must be recorded in a regulatory reserve in equity.
 - ii. When the IFRS provision is less than 1.5%, the Bank must ensure that this percentage is completed and recorded in the profit or loss. Likewise, the difference to complete the 3% of the generic provision established herein must be recorded in a new regulatory reserve in equity.

Banco Latinoamericano de Comercio Exterior, S. A. and Subsidiaries

Notes to the consolidated financial statements (Amounts expressed in thousands of U.S. dollars, unless otherwise indicated)

32. Applicable laws and regulations (continued)

Modified special mention loans (continued)

In accordance with the requirements of Article 4-E of Rule No. 9-2020, a detail of the portfolio of modified special mention category loans and their respective provisions and regulatory reserves as of December 31, 2020, classified according to the threestage model of IFRS 9 follows:

Modified special mention loans (continued)

Modified special mention loans Modified loans Corporate

(-) Modified loans secured by pledged deposits in the same bank up to the guaranteed amount

(+) Interest receivable

(-) Unearned interest and deferred fees Total loan portfolio subject to provisions Rule No. 9-2020

Allowance

Allowance IFRS 9 Collective allowance (complement to 1.5%)^{*} Regulatory reserve (complement to 3%) *

Total allowance and reserves

* Because IFRS 9 provision for modified special mention loans by \$1.7million exceeds the generic provision equivalent to the 3% required by Rule No. 9-2020, the Bank does not require additional complementary equity reserves to the existing provision.

As part of the Bank's risk management, both individual and collective analyzes of the condition of the loans have been developed, including the segmentation of the portfolio in order to identify the employment situation or the opening of economic activity of each client and define who will be able to meet their bank obligations, who will have difficulties in doing so and who will definitely not be able to meet and thus determine if there has been a significant increase in risk and classify those loans according to the corresponding impairment stage. Additionally, different agreements have been reached with clients based on the individual analysis of their ability to generate the cash flows necessary to meet their obligations.

As of December 31, 2020, the modified special mention loan has complied with its contractual payments of the loan agreement.

It is important to note that in addition to the modified special mention loan, the Bank maintains corporate loans in Substandard category and that they embraced to the moratorium of Law No. 156 of June 30, 2020. As of December 31, 2020, these loans carrying amount is \$10.9 million (including interest) and present interest payments with a default of up to 30 days.

Notes to the consolidated financial statements *(Amounts expressed in thousands of U.S. dollars, unless otherwise indicated)*

32. Applicable laws and regulations (continued)

Methodology for the constitution of the regulatory credit reserve

The Superintendence of Banks of Panama by means of the General Resolution of Board of Directors SBP-GJD-0003-2013 of July 9, 2013, establishes the accounting methodology for differences that arise between the application of the International Financial Reporting Standards (IFRS) and the application of prudential regulations issued by the SBP; as well as the additional disclosures required to be included in the notes to the consolidated financial statements.

The parameters established in this methodology are the following:

- 1. The calculations of accounting balances in accordance with IFRS and the prudential standards issued by the SBP will be carried out and the respective figures will be compared.
- 2. When the calculation made in accordance with IFRS results in a higher reserve or provision for the bank compared to the one resulting from the use of the prudential standards issued by the SBP, the Bank will account the IFRS figures.
- 3. When the impact of the use of prudential standards results in a higher reserve or provision for the Bank, the effect of the application of IFRS will be recognized in profit or loss, and the difference between IFRS calculation compared to the prudential standards calculation will be appropriated from retained earnings as a regulatory credit reserve. If the Bank does not have sufficient retained earnings, the difference will be presented as an accumulated deficit account.
- 4. The regulatory credit reserve mentioned in paragraph 3 of this Rule may not be reversed against retained earnings as long as there are differences between IFRS and the originated prudential regulations.

Considering that the Bank presents its consolidated financial statements under IFRS, specifically for its expected credit reserves under IFRS 9, the line "Regulatory credit reserve" established by the SBP has been used to present the difference between the application of the accounting standard used and the prudential regulations of the SBP to comply with the requirements of Rule No. 4-2013.

As of December 31, 2020, and 2019, the total amount of the dynamic provision and the regulatory credit reserve calculated according to the guidelines of Rule No. 4-2013 of the SBP is \$136 million for both years, appropriated from retained earnings for purposes of compliance with local regulatory requirements. This appropriation is restricted from dividend distribution in order to comply with local regulations.

The provision and reserve are detailed as follows:

	December 31, 2020	December 31, 2019
Dynamic provision	136,019	136,019
Regulatory credit reserve	<u>-</u>	
	136,019	136,019

Capital reserve

In addition to capital reserves required by regulations, the Bank maintains a capital reserve of \$95.3 million, which was voluntarily established. Pursuant to Article No. 69 of the Banking Law, reduction of capital reserves requires prior approval of SBP.

33. Subsequent events

The Bank announced a quarterly cash dividend of \$0.25 US dollar cents per share corresponding to the fourth quarter of 2020. The cash dividend was approved by the Board of Directors at its meeting held on February 12, 2021 and it was paid on March 10, 2021 to the Bank's stockholders as of February 23, 2021 record date.
